A Brief History of Artificial Intelligence Michael Wooldridge, 2025-09-23 From Oxford's leading AI researcher comes a fun and accessible tour through the history and future of one of the most cutting edge and misunderstood fields in science Artificial Intelligence The somewhat ill defined long term aim of AI is to build machines that are conscious self aware and sentient machines capable of the kind of intelligent autonomous action that currently only people are capable of As an AI researcher with 25 years of experience professor Mike Wooldridge has learned to be obsessively cautious about such claims while still promoting an intense optimism about the future of the field There have been genuine scientific breakthroughs that have made AI systems possible in the past decade that the founders of the field would have hailed as miraculous Driverless cars and automated translation tools are just two examples of AI technologies that have become a practical everyday reality in the past few years and which will have a huge impact on our world While the dream of conscious machines remains Professor Wooldridge believes a distant prospect the floodgates for AI have opened Wooldridge's A Brief History of Artificial Intelligence is an exciting romp through the history of this groundbreaking field a one stop shop for AI's past present and world changing future

Outer space historically always amongst the most developed domains has not remained untouched for long and space applications have started to increasingly rely on AI. However, this increase in use also leads to a myriad of legal issues, particularly the issue of responsibility and liability under Article VI and Article VII of the Outer Space Treaty and the Liability Convention. Our legal norms, whether they be domestic or international in nature, are ultimately built around human behaviour and when applied to AI might not function. Should damage caused by an AI-enabled space object arise, it proves difficult to assess the responsibility of the appropriate State party under Article VI of the Outer Space Treaty or the liability of the launching State. While legal literature is primarily concerned with domestic legal issues arising from the use of AI, an in-depth analysis concerning State responsibility and liability for AI-enabled space activities is absent. Space legal literature strongly favours a view advocating for the creation of new hard law in form of new binding legal instruments or the amendment of existing law. Suggestions *de lege ferenda* are often relied on by authors. Given the inherent difficulty in creating new law or amending existing legal instruments, this book proposes to look towards the *lex lata* and argues that the existing legal norms of State responsibility, State liability, and treaty law are sufficient to govern the responsibility of States for their AI-enabled space activities. The present research looks at these issues from a public international law perspective and proposes a solution within the *lex lata*.

How Executives Should Think About AI Stephen J. Andriole, 2025-09-30. Much of what is said about AI is misleading or just plain wrong. It's also sometimes intended to frighten everyone about a future that's unlikely to occur. Think Bill Gates, Elon Musk, Steve Wozniak and Geoffrey Hinton among others. AI will not steal children, hold hostages for bitcoins or start nuclear wars. But it will fundamentally change business through the intelligent automation of many routine and nonroutine tasks that companies perform all the time. Old business models will die as fast as new ones emerge. Whole industries will be reengineered.

reinvented and reimagined Some will be displaced altogether Some industries will be disrupted in every sense of the word in just three to five years In fact it s already begun How Executives Should Think About AI Straight Talk About the Inevitable prepares executives for the AI future It s not a complicated treatise on AI or a theoretical look at how new technology can transform business models and processes It s a series of conversations masquerading as chapters designed to help executives quickly understand AI what it can do and what they should do about AI machine learning ML and generative AI GenAI right now These conversations about AI are intended to get executives up to speed on AI ML and GenAI so that they become AI comfortable in many ways including launching a steady stream of demonstration prototypes to help their companies explore AI s capabilities and potential benefits These timely conversations can help executives understand how AI will impact their companies and their professional success It s straight talk about the most important technology since the Internet Executives have no choice but to embrace AI to accomplish their professional goals This book helps accomplish these goals It helps them make decisions about what AI can and cannot do for their companies **AI** ,2005 **The African Studies Companion** Hans M.
