grow your ecommerce business you need to gain more clients And to achieve it you have to provide high quality customer experience Sounds logical But the more visitors on your website the more questions your support agents have to handle And here is the challenge you need to face to successfully grow your store How to serve more clients answer more questions and maintain the highquality of support at the same time There are two ways The first is to constantly hire new support agents It probably will work but the cost you ll have to take for constantly recruiting and training new employees will be huge The second way is connected to technology that took the ecommerce industry and not only this one by a storm and will stay with us for a long time If not forever The AI      **AI Chatbots in Customer Service** Evgeny Kagan, Maqbool Dada, Brett Hathaway, 2022 Despite recent advances in language processing algorithms chatbot technology continues to face adoption hurdles We survey chatbot users about their experiences and use their testimonies to construct a decision model of customer choice between the chatbot service channel and the live agent service channel The fundamentals of this choice are the time spent in line and in service the chatbot s success rate and the qualitative differences in the service experience provided by the chatbot and by the live agent We then conduct experiments in which participants choose and then experience the chatbot or the live agent channel as we vary operational i e times spent and chatbot success rates and qualitative features of the chatbot We find that users respond positively to improvements in chatbot operational performance however the chatbot channel remains underutilized relative to what expected time minimization would predict Additional experiments show that this underutilization is caused by two separate mechanisms algorithm aversion aversion to an algorithmic service provider and gatekeeper aversion aversion to any service format that may involve multiple stages Examining potential remedies we find that algorithm aversion can be mitigated by making salient the expected time savings offered by the chatbot However gatekeeper aversion is more persistent and harder to overcome We conclude by building and estimating a structural model of channel demand and by proposing a behavior aware service design that reduces the firm s staffing costs by up to 22%
