Bourgeault,2022 Anyone responsible for transcribing audio recorded interviews understands how tedious this process can be

Ensuring an accurate reflection of what participants shared during an interview is no easy feat. Transcription involves the careful depiction of data involving repeated listening. During graduate school I utilized a Panasonic tape recorder along with microcassettes to capture my participants' stories. Listening to the slow motion playback took hours and eventually the rewind button became worn out. From there I upgraded to using QuickTime software on my laptop. This method of transcription was faster especially when utilizing a foot pedal. Technology has come a long way which is why I am excited to introduce you to Otter. Otter.ai is a technology company that has developed a speech to text transcription program. The software allows you to record and review transcripts in real time which saves time and money. Otter.ai 2021 June 10. This case study highlights the importance of transcribing in qualitative research and how Otter can be utilized for research purposes. A critical review on the overall effectiveness of Otter will be discussed along with an in depth look at best practices for using innovative digital transcription methods.

**Multimodal Interactive Handwritten Text Transcription** Verónica Romero, Alejandro Héctor Toselli, Enrique Vidal, 2012. This book presents an interactive multimodal approach for efficient transcription of handwritten text images. This approach rather than full automation assists the expert in the recognition and transcription process. Until now handwritten text recognition HTR systems are far from being perfect and heavy human intervention is often required to check and correct the results of such systems. The interactive scenario studied in this book combines the efficiency of automatic handwriting recognition systems with the accuracy of the experts leading to a cost effective perfect transcription of the handwritten text images. The interactive system here allows the user to repeatedly interact with the system. Hence the quality and ergonomics of the interactive process is crucial for the success of the system. Moreover more ergonomic multimodal interfaces are used to obtain an easier and more comfortable human machine interaction.
