**Innovation and Experiential Learning in Academic Libraries** Sarah Nagle, Elias Tzoc, 2022-03-15 As technology advances and the skills required for the future workforce continue to change rapidly academic libraries have begun to expand the definition of information literacy and the type of library services they provide to better prepare students for the constantly developing world they will face upon graduation More than teaching the newest technologies information literacy is expanding to help students develop enduring skills such as critical thinking creativity problem solving communication teamwork and more Innovation and Experiential Learning in Academic Libraries Meeting the Needs of 21st Century Students addresses the multitude of ways that academic librarians are collaborating with faculty and helping students develop these enduring skills by developing and integrating active and experiential learning approaches into teaching activities This book is divided into three sections The first section explores the role that library leaders play in supporting and advocating for innovation in information literacy and library services The second section features case studies from librarians who are implementing novel and multidisciplinary approaches to information literacy and innovative services such as maker scholarship digital humanities undergraduate research experiences and new active learning strategies These case studies also highlight how the COVID 19 pandemic has transformed teaching and learning in academic libraries The final section looks to the future providing guidance to information professionals on the issues and technologies that will drive transformations of information literacy in the coming years such as artificial intelligence and new information literacy applications As such library administrators academic librarians information literacy practitioners and technologists will benefit from this book

**Artificial Intelligence in Orthopaedic Surgery Made Easy** Filippo Familiari, Olimpio Galasso, Giorgio Gasparini, 2024-11-19 This book is an essential reference guide for the use of artificial intelligence in orthopaedic surgery It covers all related topics from machine and deep learning through practical applications in all orthopaedic sub disciplines to ethical issues and potential risks International renowned experts equip the reader with solid scientific foundations and practical tips combining accurate literature reviews with high quality original images Addressing a hot topic for the present and next generation of medical specialists this book is a must read for orthopaedic surgeons radiologists and health informatic specialists alike

**Cybersecurity in the Age of Artificial Intelligence** Pasi Koistinen, 2025-07-12 Artificial intelligence has stopped knocking politely on the door of cybersecurity it has kicked it open set up shop inside and begun rewriting the rules From generative phishing emails indistinguishable from trusted colleagues to adaptive malware that evolves faster than defenders can react AI has made the threat landscape faster smarter and far less predictable This book is a practical guide to that unsettling reality It doesn't trade in hype or hand waving optimism Instead it lays out in plain language how AI systems create new risks what happens when security practices built for deterministic software fail and why human vigilance and organizational discipline are more important than ever Inside you'll

discover How attackers are already using AI to automate reconnaissance generate malicious code and industrialize social engineering at a scale no human team could match Why defending AI is a fundamentally different challenge with attack surfaces embedded in training data model weights and seemingly innocuous prompts How familiar safeguards like static rules perimeter defenses and blacklists fall apart when faced with systems that learn infer and sometimes hallucinate What it takes to design secure trustworthy AI systems from threat modeling and auditing pipelines to deploying explainable models that don't sacrifice accountability for convenience Written for security leaders engineers policymakers and technologists who recognize that the convergence of AI and cybersecurity isn't theoretical it's already operational this book offers a strategic roadmap for navigating a landscape where yesterday's defenses are no longer enough You'll explore real world case studies chatbots leaking confidential data with alarming politeness AI driven phishing campaigns that slip past even well trained employees and defensive models that fail silently because they can't explain their own reasoning Along the way you'll learn frameworks to separate the promising from the perilous the actionable from the aspirational Artificial Intelligence Cybersecurity isn't a manual for fine tuning models or a primer for beginners It assumes you already sense that something is shifting and provides the clarity examples and strategies to respond If you're responsible for securing critical systems or shaping the policies that govern them this book will help you ask better questions make better decisions and avoid the costly mistake of treating AI as just another line item in your technology stack Because in this new era the question isn't whether AI will reshape your security strategy The question is whether you'll be ready when it does

Invocational Media Chris Chesher, 2023-10-19 Invocational Media critiques the sociotechnical power of digital technologies by introducing the concept of invocational media What is an invocation Ask your voice assistant

and it will define it for you It is a media artefact that responds to many invocations such as seeking the weather forecast requesting any song you can name or turning on the lights almost magically This contemporary manifestation of the ancient practice of invocation gives an immediate response to your call in a way that Chris Chesher argues is the characteristic power of all computers which he redefines as invocational media This book challenges the foundations of computer science by offering invocation as a powerful new way of conceptualising digital technologies Drawing on media philosophy Deleuze Guattari Heidegger Latour Austin Innis and McLuhan it critiques the representationalism of data processing artificial intelligence and virtual reality Invocational media seem to empower individuals but necessarily subject users to corporate and government monopolies of invocation They offer many solutions but only by reducing everything to the same kind of act They complicate agency in their indifference as to whether invokers are human or non human With robotics they invoke material form to act physically and autonomously People willingly make themselves invocable to surveillance and control by creating their own profiles and marking themselves with biometrics This ground breaking book will change how you think about digital media by showing they are in fact invocational media
