Chinese Mathematics A Concise History:

Chinese Mathematics Yan Li, Shiran Du, 1987 This volume presents a record of mathematical developments in China over a period of more than 2000 years It goes into greater detail than ever previously available in English Because the emphasis in Chinese mathematics is on algorithms rather than proofs readers will find results such as Bezout's theorem and Horner's method appearing in a very different context from the familiar tradition of Euclidean deductive geometry The Chinese always preferred algebraic methods and by the 13th century A D they were the best algebraists in the world The original Chinese point of view is retained by the translators They have supplemented the text with short explanatory comments and references to all relevant reference sources available in the West An extensive bibliography is included creating a work which will appeal to general readers interested in Chinese history as well as historians of mathematics **A Concise History of Mathematics** Dirk Jan Struik, 1967 This compact well written history covers major mathematical ideas and techniques from the ancient Near East to 20th century computer theory surveying the works of Archimedes Pascal Gauss Hilbert and many others The author's ability as a first class historian as well as an able mathematician has enabled him to produce a work which is unquestionably one of the best Nature **A Concise History of Mathematics** Dirk J. Struik, 2012-06-28 This compact well written history first published in 1948 and now in its fourth revised edition describes the main trends in the development of all fields of mathematics from the first available records to the middle of the 20th century Students researchers historians specialists in short everyone with an interest in mathematics will find it engrossing and stimulating Beginning with the ancient Near East the author traces the ideas and techniques developed in Egypt Babylonia China and Arabia looking into such manuscripts as the Egyptian Papyrus Rhind the Ten Classics of China and the Siddhantas of India He considers Greek and Roman developments from their beginnings in Ionian rationalism to the fall of Constantinople covers medieval European ideas and Renaissance trends analyzes 17th and 18th century contributions and offers an illuminating exposition of 19th century concepts Every important figure in mathematical history is dealt with Euclid Archimedes Diophantus Omar Khayyam Boethius Fermat Pascal Newton Leibniz Fourier Gauss Riemann Cantor and many others For this latest edition Dr Struik has both revised and updated the existing text and also added a new chapter on the mathematics of the first half of the 20th century Concise coverage is given to set theory the influence of relativity and quantum theory tensor calculus the Lebesgue integral the calculus of variations and other important ideas and concepts The book concludes with the beginnings of the computer era and the seminal work of von Neumann Turing Wiener and others The author's ability as a first class historian as well as an able mathematician has enabled him to produce a work which is unquestionably one of the best Nature Magazine **A Cultural History of Modern Science in China** Benjamin A. Elman, 2009-07-01 In A Cultural History of Modern Science in China Elman has retold the story of the Jesuit impact on late imperial China circa 1600 1800 and the Protestant era in early modern China from the 1840s to 1900 in a concise and

Encyclopaedia of the History of Science, Technology, and Medicine in Non-Western Cultures Helaine Selin, 1997-07-31 The Encyclopaedia fills a gap in both the history of science and in cultural studies Reference works on other cultures tend either to omit science completely or pay little attention to it and those on the history of science almost always start with the Greeks with perhaps a mention of the Islamic world as a translator of Greek scientific works The purpose of the Encyclopaedia is to bring together knowledge of many disparate fields in one place and to legitimize the study of other cultures science Our aim is not to claim the superiority of other cultures but to engage in a mutual exchange of ideas The Western academic divisions of science technology and medicine have been united in the Encyclopaedia because in ancient cultures these disciplines were connected This work contributes to redressing the balance in the number of reference works devoted to the study of Western science and encourages awareness of cultural diversity The Encyclopaedia is the first compilation of this sort and it is testimony both to the earlier Eurocentric view of academia as well as to the widened vision of today There is nothing that crosses disciplinary and geographic boundaries dealing with both scientific and philosophical issues to the extent that this work does xi PERSONAL NOTE FROM THE EDITOR Many years ago I taught African history at a secondary school in Central Africa

Fleeting Footsteps: Tracing The Conception Of Arithmetic And Algebra In Ancient China (Revised Edition) Tian Se Ang, Lay Yong Lam, 2004-04-06 The Hindu Arabic numeral system 1 2 3 is one of mankind's greatest achievements and one of its most commonly used inventions How did it originate Those who have written about the numeral system have hypothesized that it originated in India however there is little evidence to support this claim This book provides considerable evidence to show that the Hindu Arabic numeral system despite its commonly accepted name has its origins in the Chinese rod numeral system This system was widely used in China from antiquity till the 16th century It was used by officials astronomers traders and others to perform addition subtraction multiplication division and other arithmetic operations and also used by mathematicians to develop arithmetic and algebra Based on this system numerous mathematical treatises were written Sun Zi suanjing The Mathematical Classic of Sun Zi written around 400 AD is the earliest existing work to have a description of the rod numerals and their operations With this treatise as a central reference the first part of the book discusses the development of arithmetic and the beginnings of algebra in ancient China and on the basis of this knowledge advances the thesis that the Hindu Arabic numeral system has its origins in the rod numeral system Part Two gives a complete translation of Sun Zi suanjing In this revised edition Lam Lay Yong has included an edited text of her plenary lecture entitled Ancient Chinese Mathematics and Its Influence on World Mathematics which was delivered at the International Congress of Mathematicians Beijing 2002 after she received the prestigious Kenneth O May Medal conferred by the International Commission on the History of Mathematics This should serve as a useful and easy to comprehend introduction to the book

The History of Modern Mathematics Eberhard Knobloch, 1994-07-05 This volume

contains nine essays dealing with historical issues of mathematics. The topics covered span three different approaches to the history of mathematics that may be considered both representative and vital to the field. The first section, *Images of Mathematics*, addresses the historiographical and philosophical issues involved in determining the meaning of mathematical history. The second section, *Differential Geometry and Analysis*, traces the convoluted development of the ideas of differential geometry and analysis. The third section, *Research Communities and International Collaboration*, discusses the structure and interaction of mathematical communities through studies of the social fabric of the mathematical communities of the U.S. and China.

A History of Chinese Mathematics Jean-Claude Martzloff, 2007-08-17 Since the end of the 19th century a number of specialised journals albeit with a large audience have regularly included articles on the history of Chinese mathematics while a number of books on the history of mathematics include a chapter on the subject. Thus the progressive increase in our knowledge of the content of Chinese mathematics has been accompanied by the realisation that as far as results are concerned there are numerous similarities between Chinese mathematics and other ancient and medieval mathematics. For example Pythagoras theorem, the double false position rules, Hero's formulae and Ruffini-Horner's method are found almost everywhere. As far as the reasoning used to obtain these results is concerned, the fact that it is difficult to find rational justifications in the original texts has led to the reconstitution of proofs using appropriate tools of present-day elementary algebra. Consequently the conclusion that Chinese mathematics is of a fundamentally algebraic nature has been ventured. However in recent decades new studies particularly in China and Japan have adopted a different approach to the original texts in that they have considered the Chinese modes of reasoning as these can be deduced from the rare texts which contain justifications. By studying the results and the methods explicitly mentioned in these texts hand in hand this Chinese and Japanese research has attempted to reconstruct the conceptions of ancient authors within a given culture and period without necessarily involving the convenient but often distorting social and conceptual framework of present-day mathematics.

Classics of Mathematics Ronald Calinger, 1995 Appropriate for undergraduate and select graduate courses in the history of mathematics and in the history of science. This edited volume of readings contains more than 130 selections from eminent mathematicians from Archimedes to Hilbert and Noether. The chapter introductions comprise a concise history of mathematics based on critical textual analysis and the latest scholarship. Each reading is preceded by a substantial biography of its author.

In this latest edition, now in a bigger format, its scope has been dramatically enlarged by the addition of one million words of new text. Twelve years in the making, the new manual introduces students to different types of transmitted, excavated, and artifactual sources from prehistory to the twentieth century. It also examines the context in which the sources were produced, preserved, and received, the problems of research and interpretation associated with them, and the best most up-to-date
