Chinese Education Irving Epstein, 2017-12-12 This book first published in 1991 is concerned with educational change It seeks to place Chinese educational policies within the broader social context of Chinese development and modernisation imperatives by analysing issues germane to specific educational structures and sectors At the same time it attempts to inform the reader of larger policy issues which affect the educational system as a whole and speak to more global concerns the nature of Chinese student activism gender inequality rural urban disparities educational inequality the influences of market forces and the growth of professionalism

**Chinese Education** Irving Epstein, 1991 First Published in 1991 Routledge is an imprint of Taylor Francis an informa company *Handbook of Research on Challenges and Opportunities in Launching a Technology-Driven International University* Khosrow-Pour, D.B.A., Mehdi, 2019-02-22 The global digital economy continues to demand the need for educated and highly trained professionals requiring higher learning institutions to provide accessible technology driven experience to prepare future leaders effectively However there are challenges involved in creating a robust curriculum and recruiting top notch faculty all over the world while also meeting the academic criteria to offer effective academic programs and degrees to students The Handbook of Research on Challenges and Opportunities in Launching a Technology Driven International University is a pivotal reference source that provides empirical and theoretical research focused on the effective construction of technology driven higher learning international universities While highlighting topics such as accelerated and innovative curriculum recruitment of international faculty on campus development and distance learning systems this publication explores the financial and economic impacts of launching a university and the methods of how to identify the appropriate locale for universities and or branch campuses that will ideally complement the local interest of business sectors within the selected location This book is ideally designed for entrepreneurs practitioners academicians administrators government officials researchers and consultants *Education in the New China*

Yvonne Turner, Amy Acker, 2017-07-05 The effects of the de regulation of the Chinese University system have been nothing short of spectacular This fascinating book examines China s higher education system and how it s new and unique blend of foreign and Chinese perspectives impact on both the lives of students and academics and wider Chinese society Using a range of in depth interviews and unique research it provides open and often frank accounts of life work and education in China from the Cultural Revolution to the creation of its market focused entrepreneurial generation *Contemporary Chinese Education* Ruth Hayhoe, 2019-08-01 Education is seen by the Chinese as a key element in the modernisation of their country and in maintaining socialism This book first published in 1984 examines the nature of modern education in China since 1976 and looks at different parts of the system the content of teaching and teaching styles It considers how far the Chinese educational system has been affected by foreign powers and changing political ideology and is unique in that using empirical data it places the Chinese system in a world perspective Third World Education Anthony R. Welch, 2002-05-03

This book debunks the argument that quality in education can only be achieved by limiting or trading off equality. The quality of schooling is a major issue for Third World nations across the globe. However, there is no single measure which is universally accepted. Whether it is as some economists might argue an issue of the number of desks per classroom or one of national sovereignty is widely disputed. Defining equality in education becomes increasingly difficult in an era of globalization in which there exists a wide gap between rich and poor both within and between nations. In the context of an international move towards New Right politics and neo liberal economic ideologies both the quality and equality of education are imperiled. This book argues that any worthy definition of quality education must include the interests and participation of the underprivileged.

*Chinese Intellectuals on the World Frontier* J. A. English-Lueck, 1997-05-30 This is the study of the status of intellectuals in the People's Republic of China during and after the events of Tiananmen Square. Currently, intellectuals find themselves on the cusp of change as the socialist state monopoly on academic, scientific and technical research is yielding to market pressures. Universities must be at least partially self-sustaining. Entrepreneurial niches outside of state control are opening for intellectuals as industry privatizes. The entire society has shifted its focus from ideology to material wealth. These dramatic changes have forced choices on China's thought workers. English-Lueck, in conducting over a hundred interviews, highlights the choices and constraints of nonestablishment Chinese intellectuals at the end of the 20th century as they establish a new identity for themselves and perhaps even for China.

### **Issues and Problems in Teacher Education**

Howard B. Leavitt, 1992-04-20 A collection of studies by native scholars and experts of the major issues and problems in teacher education today in a representative group of 21 countries. Key political, economic, social and educational factors affecting teacher education against an historical background are examined.

*Power and Moral Education in China* Wangbei Ye, 2014-04-15 Chinese moral education reform in the last three decades represents the most significant decentralization of decision making power since the foundation of People's Republic of China in 1949. On one hand, it shows how de-politicized China's moral education curriculum has become following the introduction of China's Open door policy and economic reforms and the resultant social transformations. On the other hand, it reveals persistent problems in moral education caused by political stresses and tight state control. To explain these tensions, *Power and Moral Education in China* analyzes the characteristics of power relationships in school moral education curriculum goal setting, content and pedagogy selection and implementation. The ultimate purpose is to identify not only what factors impact Chinese moral education curriculum decision making at the school level but also how and why. Through a multiple case study conducted during 2008 in three schools in Shenzhen City and based on four major data collection instruments: observation, interview, questionnaire and document review, Wangbei Ye analyzes how power relationships have evolved in school moral education and how and why school power affects school moral education. Contrary to the common belief that Chinese schools are passively impacted by external forces in moral education curriculum development, this book suggests that school power is a semi-emancipatory relationship that

acts as a major force shaping moral education This means that although both the Chinese Communist Party and the state are positioned to control schools and moral education schools nonetheless have the power to either negotiate for more influence or partly emancipate themselves by collaborating with other external forces responding to grass root needs empowering school teachers and adjusting internal school management style This helps to explain the influence of Chinese schools in moral education and suggests a broader theory of power relationships in curriculum Copenhagen Papers in East and Southeast Asian Studies, 1989 *Quality in Education* Keith Watson, Celia Modgil, Sohan Modgil, 1997 One of a series of four high level debates on major educational issues this book concerns issues about the administration and control of education *East/West Education*, 1992 **The Handbook of Chinese Psychology** Michael Harris Bond, 1996 The handbook of Chinese Psychology signals a coming of age for the psychological study of Chinese people Prominent scholars from all the major fields of psychological research review integrate and explain findings in their areas of expertise from language acquisition to comparative psychotherapy from academic achievement to personal relationships from emotional expression to the practice of psychotherapy from decision making to personality structure The Handbook is a stepping stone towards a more dynamic more comprehensive and more insightful psychology of the Chinese people **Education in Post-Mao China** Jing Lin, 1993 A rare insider's view of educational development and problems in China since economic reform began in 1978 this volume critically examines the issue of political socialization through curriculum and compares the curriculum used during the Cultural Revolution with that compiled and used throughout China in 1988 Also explored are problems with student dropouts and teacher motivation in rural education and government supported nonformal education the tracking system and vocational education development in urban schools problems that came about with economic and political reform and the issue of inequality existing between and within rural and urban schools Turning to recent decentralization efforts in school administration Jing Lin analyzes evidence suggesting that educational policy is politically controlled Additionally the development of educational research in the 1980s and 1990s constitutes the topic of one chapter based on hundreds of published books and papers Finally Lin reflects on the massive student movement that arose in the spring of 1989 and delineates the social economic and political changes that sparked it This final section treats these educational changes as an interconnected whole that underlay the movement and gave it such distinctive characteristics as nonviolence and a rational constructive outlook **International Encyclopedia of Adult Education and Training** Albert Tuijnman, 1996 This Encyclopedia deals with the financing and organization of adult education and continuing vocational training throughout the world The volume provides extensive coverage of lifespan development cognition adult learning and theories and methods for the teaching of adults both now and in the future Adult education and continuing vocational training are no longer considered as two separate fields and their merge has provoked increased attention on theories and practice with particular focus on human resource development This new edition draws on articles in The International Encyclopedia of Education 2nd

Edition described by Choice as being a premier resource when judged on virtually every criteria applied to a reference work all articles have been revised and updated Adult education has undergone tremendous changes over the past decade not only has expenditure and participation increased at a global level but the field itself has also matured Continuing vocational education and workplace learning have assumed increased significance and as a result several new topics for research on adult education have emerged The many changes in the field are reflected in this volume The entries will not only cover the important concepts and definitions in the field but offer a disciplinary perspective on its development
