AI Shepherds and Electric Sheep Sean O'Callaghan,Paul A. Hoffman,2025-03-18 Since ChatGPT burst into the public consciousness in 2022 AI has thoroughly infiltrated everyday life Machines can now take on work once thought to be solely the domain of human beings from writing college essays to composing worship music How should Christians respond to this brave new technology In this accessible introduction to AI Sean O Callaghan and Paul Hoffman explore its social and ethical impacts for ministry and teaching The

authors shed light on the biblical vision for human flourishing and on how AI can help or hinder that flourishing. Avoiding both alarmism and uncritical acceptance, O'Callaghan and Hoffman offer resources and practical tools for using AI in our classrooms and congregations. AI can write a generic three-point sermon, but it cannot replace an authentic encounter between humans and the divine. In a time of cultural confusion, O'Callaghan and Hoffman encourage readers to embrace the clarity found in the gospel. The book includes a foreword by A. Trevor Sutton. AI and Human Thought and Emotion Sam Freed, 2019-07-11. The field of artificial intelligence (AI) has grown dramatically in recent decades, from niche expert systems to the current myriad of deep machine learning applications that include personal assistants, natural language interfaces, and medical, financial, and traffic management systems. This boom in AI engineering masks the fact that all current AI systems are based on two fundamental ideas: mathematics, logic, and statistics from the 19th century, and a grossly simplified understanding of biology, mainly neurons as understood in 1943. This book explores other fundamental ideas that have the potential to make AI more anthropomorphic. Most books on AI are technical and do not consider the humanities. Most books in the humanities treat technology in a similar manner. AI and Human Thought and Emotion however is about AI: how academics, researchers, scientists, and practitioners came to think about AI the way they do, and how they can think about it afresh with a humanities-based perspective. The book walks a middle line to share insights between the humanities and technology. It starts with philosophy and the history of ideas and goes all the way to usable algorithms. Central to this work are the concepts of introspection, which is how consciousness is viewed, and consciousness, which is accessible to humans as they reflect on their own experience. The main argument of this book is that AI based on introspection and emotion can produce more human-like AI. To discover the connections among emotion, introspection, and AI, the book travels far from technology into the humanities and then returns with concrete examples of new algorithms. At times philosophical, historical, and technical, this exploration of human emotion and thinking poses questions and provides answers about the future of AI.
