Supporting Personalized Learning and Students' Skill Development With AI Khaldi, Mohamed, 2025-03-05 The integration of artificial intelligence AI into education has the potential to fundamentally change pedagogical practices with a positive impact on all aspects of teaching and learning. It is possible to design personalized learning paths for each learner, including those with special needs or who speak different languages, by adjusting the content and pace according to their strengths and weaknesses. AI tools such as virtual assistants and interactive educational applications can give immediate feedback to learners, which is of paramount importance to keep them engaged and encourage continuous learning. Similarly, teachers can view AI-based data analytics and recommendations to improve their teaching methods and adapt their strategies in real time. **Supporting Personalized Learning and Students' Skill Development With AI** offers an in-depth exploration of how to integrate AI technology into pedagogical practice to revolutionize education by exploring all aspects of AI in education, from intelligent tutoring systems that tailor lessons to the needs of each learner to automating administrative tasks that save teachers time. While addressing the ethical and practical challenges of this transformation, it highlights the urgent need to equip educators with the skills they need to benefit from AI. Covering topics such as autonomous learning, emotion detection, and digital literacy, this book is an excellent resource for teachers, school administrators, educational decision makers, computer developers, professionals, scholars, academicians, researchers, and more.

Artificial Intelligence in Design '91 John S. Gero, 1991 Artificial Intelligence in Design '91 is a collection of 47 papers from the First International Conference on Artificial Intelligence in Design held at Edinburgh in June 1991. The papers in this book are grouped into 13 headings starting with a background of AI design systems and to which extent AI that results from being used as a planning tool can be applied to quality-oriented design processes in architecture. A constraint-driven approach to object-oriented design is also shown on real-world objects. The use of CADSYN in the structural design of buildings is examined along with design-dependent knowledge and design-independent knowledge. Discussions on empowering designers with integrated design environments are given whereby design objects may be retrieved from catalogues without requiring users to form queries. Mention is given to automated adjustment of parameter values frequently used in computer routine applications. The book also introduces the Computer-Aided Design (CAD) as applied to architecture. Design representation using data models, non-monotonic reasoning in design, and the cognitive aspects of design using empirical studies are discussed. Topics of the industrial applications of AI in design such as the needed steps to develop a successful AI-based tool and a review of the Castlemain Project and telecommunication distribution networks follow.
