Artificial Intelligence and Machine Learning in Smart City Planning Vedik Basetti, Chandan Kumar Shiva, Mohan Rao Ungarala, Shriram S. Rangarajan, 2023-01-11 Artificial Intelligence and Machine Learning in Smart City Planning shows the reader practical applications of AIML techniques and describes recent advancements in this area in various sectors. Owing to the multidisciplinary nature, this book primarily focuses on the concepts of AIML and its methodologies such as evolutionary techniques, neural networks, machine learning, deep learning, block chain technology, big data analytics, and image processing in the context of smart cities. The text also discusses possible solutions to different challenges posed by smart cities by presenting cutting edge AIML techniques using different methodologies as well as future directions for those same techniques. Reviews the smart city concept and teaches how it can contribute to achieving urban development priorities. Explains soft computing techniques for smart city applications. Describes how to model problems for effective analysis, intelligent decision making, and optimal operation and control in the smart city paradigm. Teaches how to carry out independent projects using soft computing techniques in a vast range of areas in diverse fields like engineering, management, and sciences.

AI Meets BI Lakshman Bulusu, Rosendo Abellera, 2020-11-03 With the emergence of Artificial Intelligence (AI) in the business world, a new era of Business Intelligence (BI) has been ushered in to create real world business solutions using analytics. BI developers and practitioners now have tools and technologies to create systems and solutions to guide effective decision making. Decisions can be made on the basis of more reliable and accurate information and intelligence which can lead to valuable actionable insights for business. Previously, BI professionals were stymied by bad or incomplete data, poorly architected solutions, or even just outright incapable systems or resources. With the advent of AI, BI has new possibilities for effectiveness. This is a long awaited phase for practitioners and developers and moreover for executives and leaders relying on knowledgeable and intelligent decision making for their organizations. Beginning with an outline of the traditional methods for implementing BI in the enterprise and how BI has evolved into using self service analytics, data discovery, and most recently AI, AI Meets BI first lays out the three typical architectures of the first, second, and third generations of BI. It then takes an in depth look at various types of analytics and highlights how each of these can be implemented using AI enabled algorithms and deep learning models. The crux of the book is four industry use cases. They describe how an enterprise can access, assess, and perform analytics on data by way of discovering data, defining key metrics that enable the same, defining governance rules, and activating metadata for AI/ML recommendations. Explaining the implementation specifics of each of these four use cases by way of using various AI enabled machine learning and deep learning algorithms, this book provides complete code for each of the implementations along with the output of the code supplemented by visuals that aid in BI enabled decision making. Concluding with a brief discussion of the cognitive computing aspects of AI, the book looks at future trends including augmented analytics, automated and autonomous BI, and security and governance of AI.
