Navigating the Internet requires using addresses and corresponding names that identify the location of individual computers The Domain Name System DNS is the distributed set of databases residing in computers around the world that contain address numbers mapped to corresponding domain names making it possible to send and receive messages and to access information from computers anywhere on the Internet Many of the technical operational and management decisions regarding the DNS can have significant impacts on Internet related policy issues such as intellectual property privacy Internet freedom e commerce and cybersecurity The DNS is managed and operated by a not for profit public benefit corporation called the Internet Corporation for Assigned Names and Numbers ICANN Because the Internet evolved from a network infrastructure created by the Department of Defense the U S government originally owned and operated primarily through private contractors the key components of network architecture that enable the domain name system to function A 1998 Memorandum of Understanding MOU between ICANN and the Department of Commerce DOC initiated a process intended to transition technical DNS coordination and management functions to a private sector not for profit entity Additionally a contract between DOC and ICANN authorizes ICANN to perform various technical functions such as allocating IP address blocks editing the root zone file and coordinating the assignment of unique protocol numbers By virtue of this contract and two other legal agreements DOC exerts a legacy authority and stewardship over ICANN and arguably has more influence over ICANN and the DNS than other national governments On March 14 2014 the DOC s National Telecommunications and Information Administration NTIA announced its intention to transition its stewardship role and procedural authority over key domain name functions to the global Internet multistakeholder community If a satisfactory transition and Internet governance mechanism can be achieved NTIA stated that it would let its contract with ICANN expire as early as September 30 2015 NTIA has also stated that it will not accept any transition proposal that would replace the NTIA role with a government led or an intergovernmental organization solution Legislation was introduced into the 113th Congress seeking to limit NTIA s ability to transfer its authority over certain domain name functions Ultimately the 113th Congress enacted two legislative provisions that address NTIA s proposed transition Section 540 of the Consolidated and

Further Continuing Appropriations Act 2015 P L 113 235 provided that during FY2015 NTIA may not use any appropriated funds to relinquish its responsibility with respect to Internet domain name system functions Meanwhile Section 1639 of the FY2015 National Defense Authorization Act P L 113 235 contained Sense of Congress language on the future of the Internet and the mil top level domain The 114th Congress is likely to closely examine the benefits and risks of NTIA s proposed transition of its authority over ICANN As a transition plan is developed by ICANN and the Internet community Congress will likely monitor and evaluate that plan and seek assurances that an Internet and domain name system free of U S government stewardship will remain stable secure resilient and open Congress will also likely continue to monitor ICANN s rollout of the new generic top level domain gTLD program while also assessing to what extent ongoing and future intergovernmental telecommunications conferences constitute an opportunity for some nations to increase intergovernmental control over the Internet How these and other DNS related issues such as intellectual property cybersecurity and privacy are ultimately addressed and resolved could have profound impacts on the continuing evolution of ICANN the DNS and the Internet

Signposts in Cyberspace National Research Council, Division on Engineering and Physical Sciences, Computer Science and Telecommunications Board, Committee on Internet Navigation and the Domain Name System: Technical Alternatives and Policy Implications, 2005-08-07 The Domain Name System DNS enables user friendly alphanumeric names domain names to be assigned to Internet sites Many of these names have gained economic social and political value leading to conflicts over their ownership especially names containing trademarked terms Congress in P L 105 305 directed the Department of Commerce to request the NRC to perform a study of these issues When the study was initiated steps were already underway to address the resolution of domain name conflicts but the continued rapid expansion of the use of the Internet had raised a number of additional policy and technical issues Furthermore it became clear that the introduction of search engines and other tools for Internet navigation was affecting the DNS Consequently the study was expanded to include policy and technical issues related to the DNS in the context of Internet navigation This report presents the NRC s assessment of the current state and future prospects of the DNS and Internet navigation and its conclusions and recommendations concerning key technical and policy issues
