Artificial Intelligence and Knowledge Processing Hemachandran K, Raul Villamarin Rodriguez, Manjeet Rege, Vincenzo Piuri, Guandong Xu, Kok-Leong Ong, 2024-08-19 This book constitutes the Revised Selected Papers of the Third International Conference on Artificial Intelligence and Knowledge Processing AIKP 2023 held in Hyderabad India during October 6-8, 2023. The 20 full papers and 8 short papers were carefully selected from 118 submissions. The research areas include Artificial Intelligence and Machine Learning, Deep Learning and Computer Vision, Natural Language Processing, Intelligent Control.

Artificial Intelligence and Society Dr. R. B. Konda, Dr. Mahesh M. Ganwar, Prof. Kaveri Kori, Dr. Hanmanthappa Sedamkar, Dr. Manikamma S., Dr. Saibanna. & Dr. Mitradevi Halimani, 2024-11-08 The integration of AI-powered e-gamified modules in education has significantly impacted students' scientific attitudes and academic achievement in science. This study investigates how AI-driven gamification enhances engagement, critical thinking, and problem-solving skills, leading to improved academic performance. AI enables personalized learning experiences by adapting to individual student needs, thus fostering a more interactive and learner-centered approach. E-gamified modules provide immediate feedback, motivating students to correct errors and reinforce learning. The main aim of the study is to find out whether there is any significant difference between pre-test/post-test mean scores of secondary school students taught with and without AI-powered e-gamified modules in science. 80 samples were chosen by employing purposive sampling technique. The researcher has used standardized PhET simulation modules. The results show that the post-test mean scores of the experimental group are significantly different than that of the control group. The study suggests that when students are exposed to AI-powered gamified learning environments, they develop a more positive disposition toward scientific methods and show measurable improvements in performance. This research highlights the potential of AI in transforming traditional education by making learning more dynamic, personalized, and effective, thereby fostering a deeper understanding of science and its applications.
