Culture Design James D. White, Krista White, 2025-11-11 Strong cultures don't emerge by accident. They're built with clarity, consistency, and design. This is your guide. Today's leaders are navigating a storm of competing demands, rising economic and social pressures, rapid technological disruption, and a workforce that expects greater purpose and accountability than ever before. In this unpredictable climate, a weak culture erodes trust, loyalty, and performance. A strong one, by contrast, makes the difference between clarity and confusion, resilience and fragility. It's time to get intentional about your company's culture. In this practical and inspiring book, you'll find a clear, actionable framework

rooted in design thinking and inclusive leadership to help you shape a culture that's resilient, empowering and built to last. Culture Design brings together James D. White's expert perspective informed by more than thirty years of operating experience across sectors and in the boardroom with his daughter Krista White's millennial perspective of modern workers' expectations from their company and its culture. This powerful combination produces a masterful joint outlook on what makes leaders best suited to build cultures that work for all. Together they've written an essential book with one central message: culture design is an indispensable pillar of strategy for organizations to thrive in the coming decades and beyond.

An Introduction to Universal Artificial Intelligence Marcus Hutter, David Quarell, Elliot Catt, 2024-05-28. *An Introduction to Universal Artificial Intelligence* provides the formal underpinning of what it means for an agent to act intelligently in an unknown environment. First presented in *Universal Algorithmic Intelligence* (Hutter 2000), UAI offers a framework in which virtually all AI problems can be formulated and a theory of how to solve them. UAI unifies ideas from sequential decision theory, Bayesian inference, and algorithmic information theory to construct AIXI, an optimal reinforcement learning agent that learns to act optimally in unknown environments. AIXI is the theoretical gold standard for intelligent behavior. The book covers both the theoretical and practical aspects of UAI. Bayesian updating can be done efficiently with context tree weighting and planning can be approximated by sampling with Monte Carlo tree search. It provides algorithms for the reader to implement and experimental results to compare against. These algorithms are used to approximate AIXI. The book ends with a philosophical discussion of Artificial General Intelligence: Can super-intelligent agents even be constructed? Is it inevitable that they will be constructed and what are the potential consequences? This text is suitable for late undergraduate students. It provides an extensive chapter to fill in the required mathematics: probability, information, and computability theory background. Artificial Intelligence and the Arts Penousal Machado, Juan Romero, Gary Greenfield, 2021-10-13. Emotions, creativity, aesthetics, artistic behavior, divergent thoughts, and curiosity are both fundamental to the human experience and instrumental in the development of human-centered artificial intelligence systems that can relate, communicate, and understand human motivations, desires, and needs. In this book, the editors put forward two core propositions: creative, artistic behavior is one of the key challenges of artificial intelligence research, and computer-assisted creativity and human-centered artificial intelligence systems are the driving forces for research in this area. The invited chapters examine computational creativity and more specifically systems that exhibit artistic behavior or can improve humans' creative and artistic abilities. The authors synthesize and reflect on current trends, identify core challenges and opportunities, and present novel contributions and applications in domains such as the visual arts, music, 3D environments, and games. The book will be valuable for researchers, creatives, and others engaged with the relationship between artificial intelligence and the arts.
