Doing Mathematics Convention Subject Calculation Analogy:

Doing Mathematics Martin H. Krieger, 2003 This book discusses some ways of doing mathematical work and the subject matter that is being worked upon and created It argues that the conventions we adopt the subject areas we delimit what we can prove and calculate about the physical world and the analogies that work for mathematicians all depend on mathematics what will work out and what won't And the mathematics as it is done is shaped and supported or not by convention subject matter calculation and analogy The causes studied include the central limit theorem of statistics the sound of the shape of a drum the connection between algebra and topology the stability of matter the Ising model and the Langlands Program in number theory and representation theory Contents Convention How Means and Variances are Entrenched as Statistics Subject The Fields of Topology Appendix The Two Dimensional Ising Model of a Ferromagnet Calculation Strategy Structure and Tactics in Applying Classical Analysis Analogy A Syzygy Between a research Program in Mathematics and a Research Program in Physics Each of Which is Itself an Analogy Mathematics in Concreto Readership Mathematicians Physicists philosophers and historians of science

The Philosophy of Mathematical Practice Paolo Mancosu, 2008-06-19 Contemporary philosophy of mathematics offers us an embarrassment of riches Among the major areas of work one could list developments of the classical foundational programs analytic approaches to epistemology and ontology of mathematics and developments at the intersection of history and philosophy of mathematics But anyone familiar with contemporary philosophy of mathematics will be aware of the need for new approaches that pay closer attention to mathematical practice This book is the first attempt to give a coherent and unified presentation of this new wave of work in philosophy of mathematics The new approach is innovative at least in two ways First it holds that there are important novel characteristics of contemporary mathematics that are just as worthy of philosophical attention as the distinction between constructive and non constructive mathematics at the time of the foundational debates Secondly it holds that many topics which escape purely formal logical treatment such as visualization explanation and understanding can nonetheless be subjected to philosophical analysis The Philosophy of Mathematical Practice comprises an introduction by the editor and eight chapters written by some of the leading scholars in the field Each chapter consists of short introduction to the general topic of the chapter followed by a longer research article in the area The eight topics selected represent a broad spectrum of contemporary philosophical reflection on different aspects of mathematical practice diagrammatic reasoning and representation systems visualization mathematical explanation purity of methods mathematical concepts the philosophical relevance of category theory philosophical aspects of computer science in mathematics the philosophical impact of recent developments in mathematical physics

Handbook of the History and Philosophy of Mathematical Practice Bharath Sriraman, 2024-04-26 The purpose of this unique handbook is to examine the transformation of the philosophy of mathematics from its origins in the history of mathematical practice to the present It aims to synthesize what is known and what has

unfolded so far as well as to explore directions in which the study of the philosophy of mathematics as evident in increasingly diverse mathematical practices is headed Each section offers insights into the origins debates methodologies and newer perspectives that characterize the discipline today Contributions are written by scholars from mathematics history and philosophy as well as other disciplines that have contributed to the richness of perspectives abundant in the study of philosophy today who describe various mathematical practices throughout different time periods and contrast them with the development of philosophy Editorial Advisory Board Andrew Aberdein Florida Institute of Technology USA Jody Azzouni Tufts University USA Ot vio Bueno University of Miami USA William Byers Concordia University Canada Carlo Cellucci Sapienza University of Rome Italy Chandler Davis University of Toronto Canada 1926 2022 Paul Ernest University of Exeter UK Michele Friend George Washington University USA Reuben Hersch University of New Mexico USA 1927 2020 Kyeong Hwa Lee Seoul National University South Korea Yuri Manin Max Planck Institute for Mathematics Germany 1937 2023 Athanase Papadopoulos University of Strasbourg France Ulf Persson Chalmers University of Technology Sweden John Stillwell University of San Francisco USA David Tall University of Warwick UK 1941 2024 This book with its exciting depth and breadth illuminates us about the history practice and the very language of our subject about the role of abstraction of proof and manners of proof about the interplay of fundamental intuitions about algebraic thought in contrast to geometric thought The richness of mathematics and the philosophy encompassing it is splendidly exhibited over the wide range of time these volumes cover from deep platonic and neoplatonic influences to the most current experimental approaches Enriched as well with vivid biographies and brilliant personal essays written by and about people who play an important role in our tradition this extraordinary collection of essays is fittingly dedicated to the memory of Chandler Davis Reuben Hersch and Yuri Manin Barry Mazur Gerhard Gade University Professor Harvard University This encyclopedic Handbook will be a treat for all those interested in the history and philosophy of mathematics Whether one is interested in individuals from Pythagoras through Newton and Leibniz to Grothendieck fields geometry algebra number theory logic probability analysis viewpoints from Platonism to Intuitionism or methods proof experiment computer assistance the reader will find a multitude of chapters that inform and fascinate John Stillwell Emeritus Professor of Mathematics University of San Francisco Recipient of the 2005 Chauvenet Prize Dedicating a volume to the memory of three mathematicians Chandler Davis Reuben Hersch and Yuri Manin who went out of their way to show to a broader audience that mathematics is more than what they might think is an excellent initiative Gathering authors coming from many different backgrounds but who are very strict about the essays they write was successfully achieved by the editor in chief The result a great source of potential inspiration Jean Pierre Bourguignon Nicolaas Kuiper Honorary Professor at the Institut des Hautes tudes Scientifiques *Primes and Particles* Martin H. Krieger, 2024-02-22 Many philosophers physicists and mathematicians have wondered about the remarkable relationship between mathematics with its abstract pure independent structures on one side and the wilderness of natural phenomena on

the other Famously Wigner found the effectiveness of mathematics in defining and supporting physical theories to be unreasonable for how incredibly well it worked Why in fact should these mathematical structures be so well fitting and even heuristic in the scientific exploration and discovery of nature This book argues that the effectiveness of mathematics in physics is reasonable The author builds on useful analogies of prime numbers and elementary particles elementary structure kinship and the structure of systems of particles spectra and symmetries and for example mathematical limits and physical situations The two dimensional Ising model of a permanent magnet and the proofs of the stability of everyday matter exemplify such effectiveness and the power of rigorous mathematical physics Newton is our original model with Galileo earlier suggesting that mathematics is the language of Nature

Shelter Island II Roman Jackiw, Khuri, Nicola N., Silvan S. Schweber, Edward Witten, 2016-02-17 In 1947 J Robert Oppenheimer organized a historic conference of physicists at Shelter Island located off the eastern tip of Long Island to discuss recent advances in theoretical physics and the direction of future

research Over three decades later the physics community held another meeting the 1983 Shelter Island Conference on Quantum Field Theory and the Fundamental Problems of Physics This volume is the record of the 1983 conference it also includes much valuable information on the 1947 conference for which no formal proceedings were ever published The latter day conference included many of the participants from the prior event as well as younger physicists who have since become prominent figures in this field Consequently this volume is a vital document in the history of physics of value to students and researchers in many branches of the subject Topics include the new inflationary universe scenario supersymmetry Stephen Hawking s presentation The Cosmological Constant Is Probably Zero superunification and the seven sphere time as a dynamical variab induced gravity and an extensive and previously unpublished paper by Edward Witten on Kaluza Klein theories Contributors include Stephen L Adler Hans Bethe M J Duff Murray Gell Mann Alan H Guth Stephen W Hawking Roman Jackiw Toichiro Kinoshita W E Lamb Jr T D Lee A D Linde R E Marshak Y Nambu K Nishijima John H Schwarz Silvan S Schweber Steven Weinberg Victor Weisskopf P C West Edward Witten and Bruno Zumino

Mathematical Reviews,2008

Shifting Paradigms Alexander Blum,2016 The publication of Thomas S Kuhn s Structure of Scientific Revolutions in 1962 stands for a turning point in the history and philosophy of science The repercussions of this work have rearticulated the theoretical framework of history and philosophy of science and have also generated discussions that contributed to the formation of the communities of historians as well as philosophers of science in many parts of the world Different approaches to history of science have since emerged and most of them have the Structure as their reference point In October 2012 a conference at the Max Planck Institute for the History of Science brought together some of the historians of science whose work has played a decisive role in the ways history of science has evolved as a field of research in the past 50 years both intellectually and institutionally This volume gathers reflections by many of these historians on the history of the history of science based on the presentations and discussions at the conference The topics covered range from personal recollections of working with Thomas Kuhn to broad overviews of the historical development of the history of science as a discipline in the past half century The series Proceedings of the Max Planck Research Library for the History and Development of Knowledge presents the results of scientific meetings on current issues and supports further cooperation on these issues via an electronic platform The volumes are available both as print on demand books and as open access publications on the Internet The material is freely accessible online at www.edition-open-access.de
