*Time Perception Science* Michael Brown, AI, 2025-02-23 Time Perception Science explores the fascinating ways our brains construct our subjective experience of time. It examines how neural mechanisms and cognitive processes work together influencing everything from planning to social interactions. One intriguing fact is that our perception of time isn't passive; it's actively shaped by factors like attention and emotion. This book uniquely emphasizes the dynamic interplay of various brain regions rather than pinpointing a single time center. The book progresses systematically, first laying the groundwork with historical and philosophical perspectives. It then delves into the neuroscience of time perception, exploring brain regions and neural oscillations. Next, it examines cognitive and psychological influences such as how conditions like Parkinson's disease can alter time perception. By integrating findings from neuroscience, psychology, and cognitive science, Time Perception Science offers a comprehensive understanding of how we experience time, including how our brains process temporal information.
