Artificial Intelligence for Learning Donald Clark, 2020-08-13 Artificial intelligence is creating huge opportunities for workplace learning and employee development. However, it can be difficult for L & D professionals to assess what difference AI can make in their organization and where it is best implemented. *Artificial Intelligence for Learning* is the practical guide L & D practitioners need to understand what AI is and how to use it to improve all aspects of learning in the workplace. It includes specific guidance on how AI can provide content curation and personalization to improve learner engagement, how it can be implemented to improve the efficiency of evaluation, assessment and reporting, and how chatbots can provide learner support to a global workforce. *Artificial Intelligence for Learning* debunks the myths and cuts through the hype around AI, allowing L & D practitioners to feel confident in their ability to critically assess where artificial intelligence can make a measurable difference and where it is worth investing in. There is also critical discussion of how AI is an aid to learning and development, not a replacement, as well as how it can be used to boost the effectiveness of workplace learning, reduce drop-off rates in online learning, and improve ROI. With real-world examples from companies who have effectively implemented AI and seen the benefits, as well as case studies from organizations including Netflix, British Airways, and the NHS, this book is essential reading for all L & D practitioners needing to understand AI and what it means in practice.

Semiotics of Friendship Claus Emmeche, 2025-01-27 A friend should be able to be an attentive listener, which made semiotician Roland Barthes wonder in his intriguing dictionary of love: cannot friendship be defined as a space with total sonority? This volume takes on the encyclopedic task in the sense of Umberto Eco, where an encyclopedia is a very complex sign to explore friendship in detail, not only as a form of love but in all its complexity as a bond that connects people and forms communities. Semiotics, the study of signs and meaning-making, is used alongside insights from a wide range of friendship studies to create a far-reaching intellectual resonance or sonority around friendship as a central human experience. As a study of the significance of friendship, it presents findings from friendship research across the globe, enabling new ways of thinking about friends. It includes key concepts from semiotics, sociology, anthropology, and other fields, briefly explained; major models of friendship from antiquity to contemporary societies; proverbs and sayings about friendship from Africa, America, Asia, and Europe; stories about famous or forgotten friends from mythology, fiction, and real history; summaries of research on friendship from selected academic disciplines; bibliographical references for further studies.
