Adopting Artificial Intelligence Tools in Higher Education Thangavel Murugan, Karthikeyan Periasamy, A.M.

Abirami, 2025-01-24 This book offers a modern exploration of the intersection of technology and education. It examines the prospects of integrating different AI tools into higher education and explores the challenges, opportunities, and innovative solutions for the different issues surrounding the use of AI in higher education. Each chapter discusses a different area where AI can enhance the educational landscape, such as AI integration in higher education and immersive virtual reality based learning environments. The book also emphasizes student centered learning, AI powered frameworks for academic excellence, and learner centric pedagogies. Furthermore, it delves into the role of AI in personalized learning in STEM courses, the development of AI based tutoring systems, and the use of machine learning to identify students' mental health status. The volume concludes with Dynamic Horizon, which examines how AI and gamification are shaping higher education. This book is essential for educators, administrators, researchers, and policymakers who want to leverage AI to create an adaptive, personalized, and engaging learning environment. **Ethical**

Weerakkody, Weifeng Chen, 2025-05-27 The book explores different uses of technology, including revising pedagogical standards, innovative teaching methods, inclusion of technological advancement as part of lifelong learning, and use of technology as part of formative learning and assessments. *Semiotics of Friendship* Claus Emmeche, 2025-01-27 A friend should be able to be an attentive listener, which made semiotician Roland Barthes wonder in his intriguing dictionary of love: cannot friendship be defined as a space with total sonority? This volume takes on the encyclopedic task in the sense of Umberto Eco, where an encyclopedia is a very complex sign to explore friendship in detail, not only as a form of love, but in all its complexity as a bond that connects people and forms communities. Semiotics, the study of signs and meaning making, is used alongside insights from a wide range of friendship studies to create a far reaching intellectual resonance or sonority around friendship as a central human experience. As a study of the significance of friendship, it presents findings from friendship research across the globe, enabling new ways of thinking about friends. It includes key concepts from semiotics, sociology, anthropology, and other fields, briefly explained. Major models of friendship from antiquity to contemporary societies, proverbs and sayings about friendship from Africa, America, Asia, and Europe, stories about famous or forgotten friends from mythology, fiction, and real history, summaries of research on friendship from selected academic disciplines, bibliographical references for further studies. **Intelligent Systems and Applications** Kohei Arai, 2022-08-30 This book is a remarkable

collection of chapters covering a wide domain of topics related to artificial intelligence and its applications to the real world. The conference attracted a total of 494 submissions from many academic, pioneering researchers, scientists, industrial

engineers and students from all around the world These submissions underwent a double blind peer reviewed process Of the total submissions 176 submissions have been selected to be included in these proceedings It is difficult to imagine how artificial intelligence has become an inseparable part of our life From mobile phones smart watches washing machines to smart homes smart cars and smart industries artificial intelligence has helped to revolutionize the whole globe As we witness exponential growth of computational intelligence in several directions and use of intelligent systems in everyday applications this book is an ideal resource for reporting latest innovations and future of AI Distinguished researchers have made valuable studies to understand the various bottlenecks existing in different arenas and how they can be overcome with the use of intelligent systems This book also provides new directions and dimensions of future research work We hope that readers find the volume interesting and valuable

Moral Machines Wendell Wallach, Colin Allen, 2008-11-19 Computers are already approving financial transactions controlling electrical supplies and driving trains Soon service robots will be taking care of the elderly in their homes and military robots will have their own targeting and firing protocols Colin Allen and Wendell Wallach argue that as robots take on more and more responsibility they must be programmed with moral decision making abilities for our own safety Taking a fast paced tour through the latest thinking about philosophical ethics and artificial intelligence the authors argue that even if full moral agency for machines is a long way off it is already necessary to start building a kind of functional morality in which artificial moral agents have some basic ethical sensitivity But the standard ethical theories don't seem adequate and more socially engaged and engaging robots will be needed As the authors show the quest to build machines that are capable of telling right from wrong has begun **Moral Machines** is the first book to examine the challenge of building artificial moral agents probing deeply into the nature of human decision making and ethics
