Public Goods and the Fourth Industrial Revolution Maria Płonka,2022-06-14 The fourth industrial revolution characterized by digitization artificial intelligence and augmented reality and megatrends such as globalization urbanization demographic changes and the knowledge based economy will trigger a series of profound technological economic social and environmental changes that will permanently and irreversibly change the role of the state in meeting social needs Industry 4 0 will also change the type nature and scope of public goods and how they are produced financed delivered and consumed This book redefines the current paradigm of public goods It proposes a model of production and distribution of public goods that acknowledges the participation of entities from the public private and nonprofit sectors The authors argue that these entities would participate in the production financing distribution and consumption of such goods

From a theoretical point of view such an inclusive approach involving the expansion of the classical state market dichotomy with new entities including citizens themselves leads to a new conceptualization and approach towards public goods. The model assumes shared responsibility, subsidiarity and paternalistic libertarianism and it allows the state to create new entities of an educational or fiscal nature while remaining the regulator of public services and distribution. Additionally, the book analyzes changes regarding the perception of public goods in the era of the fourth industrial revolution across selected sectors such as healthcare and pension systems, education, local public goods and public utility services. The book is primarily addressed to researchers, scholars and students across social and technical sciences and it will also be a useful guide for central and local administration bodies responsible for public policy. Chapters 4, 5 and 6 of this book are available for free in PDF format as Open Access from the individual product page at www.routledge.com. Four Battlegrounds Paul Scharre, 2023-02-28. An NPR 2023 Books We Love Pick. One of the Next Big Idea Club's Must Read Books. An invaluable primer to arguably the most important driver of change for our future. P. W. Singer, author of *Burn In*, an award-winning defense expert, tells the story of today's great power rivalry, the struggle to control artificial intelligence. A new industrial revolution has begun. Like mechanization or electricity before it, artificial intelligence will touch every aspect of our lives and cause profound disruptions in the balance of global power, especially among the AI superpowers: China, the United States and Europe. Autonomous weapons expert Paul Scharre takes readers inside the fierce competition to develop and implement this game-changing technology and dominate the future. *Four Battlegrounds* argues that four key elements define this struggle: data, computing, power, talent and institutions. Data is a vital resource like coal or oil, but it must be collected and refined. Advanced computer chips are the essence of computing power; control over chip supply chains grants leverage over rivals. Talent is about people, which country attracts the best researchers and most advanced technology companies. The fourth battlefield is, maybe, the most critical: the ultimate global leader in AI will have institutions that effectively incorporate AI into their economy, society and especially their military. Scharre's account surges with futuristic technology. He explores the ways AI systems are already discovering new strategies via millions of war game simulations, developing combat tactics better than any human, tracking billions of people using biometrics and subtly controlling information with secret algorithms. He visits China's National Team of leading AI companies to show the chilling synergy between China's government, private sector and surveillance state. He interviews Pentagon leadership and tours U.S. Defense Department offices in Silicon Valley, revealing deep tensions between the military and tech giants who control data, chips and talent. Yet he concludes that those tensions inherent to our democratic system create resilience and resistance to autocracy in the face of overwhelmingly powerful technology. Engaging and direct, *Four Battlegrounds* offers a vivid picture of how AI is transforming warfare, global security and the future of human freedom and what it will take for democracies to remain at the forefront of the world order.
