Designing Instruction with Generative AI Brent A. Anders, 2025-09-16 Designing Instruction with Generative AI offers a novel set of tools and strategies for leveraging generative AI to create engaging and personalized learning experiences. While instructional designers are a tremendous asset to higher education, not all colleges or universities have the robust staff needed to support all instructors on staff or large student populations. Drawing on a wealth of research, professional experience, and strategic insights, this book equips new and seasoned teaching faculty and trainers with step-by-step directions on how freely accessible artificial intelligence software can assist with all aspects of the course creation and instruction process and cater to the needs of diverse learners. Each chapter offers forward thinking and empirically validated ways to help faculty create and improve instructional materials, course design, and learning environments while supporting their digital literacies. Rather than introduce AI as a means of outsourcing subject area expertise, critical thinking, or cognitive processes, the author instead emphasizes its potential to build on traditionally honed knowledge and foundational instructional design practices. From optimizing course alignment and accessibility practices to fostering active learning, motivation, and engagement, educators will find new solutions to common teaching and learning challenges with greater efficiency in time and capacity. The Open Access version of this book is available at <http://www.taylorfrancis.com> and has been made available under a Creative Commons Attribution Non-Commercial No Derivatives CC BY-NC-ND 4.0 license.

AI-Driven Volunteer Selection Jesko Elsner, 2015-03-03 In case of medical emergency situations, a Volunteer Notification System aims to alarm potential helpers who can arrive at the victim fast enough to provide cardiopulmonary resuscitation until the professional EMS arrive on scene. A simplistic solution for selecting the corresponding volunteers is described by a so-called notification radius, i.e., alarming any volunteer with a geographic location that is within a maximum distance from the victim. Whilst the actual geographical distance is an important parameter to be considered, this work will illustrate that various additional decision parameters are of importance and elaborate an AI-driven volunteer selection system to increase the reliability and efficiency of occurring notifications.

PROMISE – PROMoting AI’s Safe usage for Elections Bipav Srivastava, Anita Nikolic, Andrea Hickerson, Tarmo Koppel, 2025-09-26 This book explores the evolving role of artificial intelligence in electoral processes, focusing on its potential to improve data-driven decision making amid the growing challenges of misinformation, manipulation, and voter suppression. It discusses how AI tools, from chatbots to comprehensive data systems, could address information gaps for voters, candidates, and election commissions, especially during a pivotal election year like 2024, while acknowledging the skepticism and fears that often surround the use of AI in such critical civic functions. Drawing on insights from three specialized workshops at major AI conferences, the book compiles research and expert discussions from fields such as security, journalism, law, and political science. It serves as a comprehensive resource for researchers, educators, practitioners, students, and government officials, offering self-contained chapters that cover both

technical and ethical aspects of employing AI in elections The work also emphasizes the importance of maintaining high professional and ethical standards in the intersection of technology and democracy This book will serve as an important resource on election topics AI techniques and trust methods for researchers teachers practitioners students and government officials in their efforts to improve democratic electoral processes with technology It assumes the reader is knowledgeable at high school level or higher about one or more topics in civics and computing concepts Sufficient background are given by contributors to make the chapters self contained and widely understandable
