## Controlling Weeds:

**Biological Approaches for Controlling Weeds** Ramalingam Radhakrishnan, 2018-09-05 Weed populations in agriculture are a major cause of yield loss. Conventionally, crop rotation and tillage practices limit the number of weed flora. Several chemical herbicides are being applied to control weed growth, but the long-term use of those chemicals does not effectively control weeds due to the development of resistant germplasms which cause hazardous effects in living organisms. The global interest in organic farming endorses the alternative way of weed control against chemical herbicides. Recently, biological agents have been added to integrated weed management strategies. Several studies reveal that plant extracts, bacteria, fungi, and their products effectively control weed seed germination and growth. The aim of this book is to discuss the current understanding of bioherbicides and strategies to weed control. A Handbook for Weed Control in Rice Kwesi Ampong-Nyarko, Surajit K. De Datta, 1991. Significance of weeds in rice farming. Rice weeds of world importance. Weed control. Principles of herbicide use. Principal rice herbicides. Weed control in irrigated rice. Weed control in rainfed lowland rice. Weed control in upland rice. Weed control in deepwater and floating rice. Management of some difficult weeds. **Controlling Weeds in the Home Garden** Herbert John Hopen, 1981. *Non-Chemical Weed Control* Khawar Jabran, Bhagirath Chauhan, 2018-01-03. Non-Chemical Weed Control is the first book to present an overview of plant crop protection against non-food plants using non-chemical means. Plants growing wild, particularly unwanted plants found in cultivated ground, to the exclusion of the desired crop, have been treated with herbicides and chemical treatments in the past. As concern over environmental food and consumer safety increases, research has turned to alternatives including the use of cover crops, thermal treatments, and biotechnology to reduce and eliminate unwanted plants. This book provides insight into existing and emerging alternative crop protection methods and includes lessons learned from past methodologies. As crop production resources decline while consumer concerns over safety increase, the effective control of weeds is imperative to insure the maximum possible levels of soil sunlight and nutrients reach the crop plants. Allows reader to identify the most appropriate solution based on their individual use or case. Provides researchers, students, and growers with current concepts regarding the use of modern environment-friendly weed control techniques. Presents methods of weed management, an important part of integrated weed management in the future. Exploits the knowledge gained from past sustainable weed management efforts.
