The history of endourology is as old as the specialty of urology itself. However, modern day endourology came into its own during the late 1970s with several path-breaking discoveries. These included percutaneous and ureteroscopic approaches to the upper tract, which following the arrival of extracorporeal shock-wave lithotripsy (SWL) in early 1980s, completely revolutionized the management of urinary stone disease, rendering open stone surgery nearly obsolete.

The subsequent years have seen steady refinements and improvement in the armamentarium and technique of endourological procedures to make them more efficient, safe and cost-effective. The addition of flexible instrumentation and lasers has improved the reach and versatility of endourological approach. There has been widespread adoption and spread of this new technology to every corner of the world. To our satisfaction, India has been right in the forefront of this revolution. There are many centers in the country performing extensive endourological work both in qualitative and quantitative terms, with increasing international recognition.

Many of us current generation of Urologists have had the privilege to be closely associated with the evolution of endourology over these last three decades, from the time when it all started, to the present time when it has blossomed into a garden full of multiple and attractive options. Never before in the history of the specialty were so many minimally-invasive choices available for management of any given urological condition. On the other hand, availability of multiple options has brought in added dilemma in decision making. In this symposium, the articles address these contentious issues.

Management of small renal stones of 1-2 cm size is one of the most important contemporary issues where selection from among the available choices (SWL, retrograde intrarenal surgery, percutaneous nephrolithotripsy [PCNL] and its minimally invasive variants) can be a real challenge today. Srivastava and Chipde detail the available evidence from the literature on the subject to help the reader make an intelligent choice.

Shock-wave lithotripsy (SWL), hailed as a "miracle cure for all stones" when it arrived, has seen its ups and downs. Dr. Greet Taily has reviewed the history and evolution of SWL, along with advances in shock-wave technology and has made out a convincing case for application of the right approach for restoring its rightful place in the urologists' armamentarium.

PCNL has been the flagstone of endourology in many parts of the world. Though the basic technique of PCNL is more or less standardized since its inception, each of the steps involved, starting from the method of puncture up to the placement of the nephrostomy tube has been a subject of debate due to differences in approach used by different authorities. As we all understand, a successful puncture is indeed the single most important step in the procedure of PCNL. Prof. Bannakij Lojanapiwat has highlighted the different methods to guide the puncture needle and the respective merits of fluoroscopically-guided, ultrasound-guided, computed tomography-guided and endoscopically-guided puncture.

The group at MPUH, Nadiad, led by Dr. Mahesh Desai has popularized the "micro-perc," a novel approach to minimally invasive PCNL. Sabnis *et al.* have highlighted the technique and its merits and have compared it to the other minimally invasive alternatives available for kidney stones. "Exit strategy" in PCNL is another subject of intense debate these days, with opinion divided between proponents of "tube" and "tubeless" procedures. Our article reviews the published literature, compares the available options and current evidence and highlights the emerging trends on this important subject.

Controversies and Innovations in Urological Surgery J. Clive Gingell, Paul H. Abrams, 2012-12-06 The title of this book is a challenge Anyone with the least knowledge of present day urology will know that there are many very controversial aspects of this subject Urology is not alone in this unsettled environment for there are similar debates in almost all other aspects of surgery In addition to the rapid changes in technology an important part of the explanation for these controversies is simply that more surgeons are prepared to admit that no area of their work is so established that it does not bear further scrutiny and assessment Argument can be tedious but debate is healthy This book aims to present material that is debatable experienced practitioners of each topic explain why an opinion or preference can be sustained The purist might wish to have these opinions resolved by a well planned clinical trial but experience of clinical trials shows that they do not always produce results that are easily translated into a positive change in clinical practice Would the reader be persuaded more by a statistically significant difference or by an experienced clinician who has reached certain conclusions Both are risky but since surgical techniques are often not easily converted into appropriate studies or trials the Editors have obtained the best opinion on each controversy and innovation The media adore controversy for its own sake The medical profession accepts controversy but knows that few events in medicine are absolute and few procedures can be done only by one method
