Keyes, Olof Widlund, Walter Zulehner, 2008-01-02 Domain decomposition is an active interdisciplinary research field concerned with the development analysis and implementation of coupling and decoupling strategies in mathematical and computational models This volume contains selected papers presented at the 17th International Conference on Domain Decomposition Methods in Science and Engineering It presents the newest domain decomposition techniques and examines their use in the modeling and simulation of complex problems

Distributed Control of Robotic Networks Francesco Bullo, Jorge Cortés, Sonia Martínez, 2009-07-06 This self contained introduction to the distributed control of robotic networks offers a distinctive blend of computer science and control theory The book presents a broad set of tools for understanding coordination algorithms determining their correctness and assessing their complexity and it analyzes various cooperative strategies for tasks such as consensus rendezvous connectivity maintenance deployment and boundary estimation The unifying theme is a formal model for robotic networks that explicitly incorporates their communication sensing control and processing capabilities a model that in turn leads to a common formal language to describe and analyze coordination algorithms Written for first and second year graduate students in control and robotics the book will also be useful to researchers in control theory robotics distributed algorithms and automata theory The book provides explanations of the basic concepts and main results as well as numerous examples and exercises Self contained exposition of graph theoretic concepts distributed algorithms and complexity measures for processor networks with fixed interconnection topology and for robotic networks with position dependent interconnection topology Detailed treatment of averaging and consensus algorithms interpreted as linear iterations on synchronous networks Introduction of geometric notions such as partitions proximity graphs and multicenter functions Detailed treatment of motion coordination algorithms for deployment rendezvous connectivity maintenance and boundary estimation

Time Parallel Time Integration Martin

J. Gander, Thibaut Lunet, 2024-10-15 Predicting the future is a difficult task but as with the weather it is possible with good models But how does one predict the far future before the near future is known Time parallel time integration also known as PinT Parallel in Time methods aims to predict the near and far future simultaneously In this self contained book the first on the topic readers will find a comprehensive and up to date description of methods and techniques that have been developed to do just this The authors describe the four main classes of PinT methods shooting type methods waveform relaxation methods time parallel multigrid methods and direct time parallel methods In addition they provide historical background for each of the method classes complete convergence analyses for the most representative variants of the methods in each class and illustrations and runnable MATLAB code An ideal introduction to this exciting and very active research field Time Parallel Time Integration can be used for independent study or for a graduate course Wideband Circuit Design Herbert J. Carlin, Pier Paolo Civalleri, 1997-11-20 Wideband Circuit Design starts at a foundational level and proceeds at a carefully gauged pace to advanced topics providing a self sufficient text for specialization in wideband analog circuit design for the fields of telecommunications and related areas Basic theory and comprehensive circuit analysis methods oriented for application to general network computer programs are detailed and then extended to applicational topics such as filters delay structures equalizers matching networks broadband amplifiers and microwave components Novel and simplified approaches to such fundamental topics as linear circuit time domain response synthesis of cascaded networks and the construction of Chebychev and elliptic transfer functions are given For the first time in book form a unified presentation of analytic matching and gain bandwidth theory integrated with the numerical Real Frequency design technique originally published by the authors is delineated Wideband Circuit Design presents all the concepts techniques and procedures you need to gain the broad understanding necessary for finding creative solutions to wideband circuit design problems

Transport Theory Richard Bellman, Garrett Birkhoff, Ibrahim Abu-Shumays, American Mathematical Society, Society for Industrial and Applied Mathematics, 1969 The industrial and military applications of atomic energy have stimulated much mathematical research in neutron transport theory The possibility of controlled thermonuclear processes has similarly focussed attention upon plasmas sometimes called the fourth state of matter Independently many classical aspects of kinetic theory and radiative transfer theory have been studied both because of their basic mathematical interest and of their physical applications to areas such as upper atmosphere meteorology introduction **The Encyclopaedia Britannica: Ref to Shu**

Numerical Methods for Stochastic Partial Differential Equations with White Noise Zhongqiang Zhang, George Em Karniadakis,2017-09-01 This book covers numerical methods for stochastic partial differential equations with white noise using the framework of Wong Zakai approximation The book begins with some motivational and background material in the introductory chapters and is divided into three parts Part I covers numerical stochastic ordinary differential equations Here the authors start with numerical methods for SDEs with delay using the Wong Zakai approximation and finite difference in time Part II covers temporal white noise Here the authors consider SPDEs as PDEs driven by white noise where discretization of white noise Brownian motion leads to PDEs with smooth noise which can then be treated by numerical methods for PDEs In this part recursive algorithms based on Wiener chaos expansion and stochastic collocation methods are presented for linear stochastic advection diffusion reaction equations In addition stochastic Euler equations are exploited as an application of stochastic collocation methods where a numerical comparison with other integration methods in random space is made Part III covers spatial white noise Here the authors discuss numerical methods for nonlinear elliptic equations as well as other equations with additive noise Numerical methods for SPDEs with multiplicative noise are also discussed using the Wiener chaos expansion method In addition some SPDEs driven by non Gaussian white noise are discussed and some model reduction methods based on Wick Malliavin calculus are presented for generalized polynomial chaos expansion methods Powerful techniques are provided for solving stochastic partial differential equations This book can be considered as self contained Necessary background knowledge is presented in the appendices Basic knowledge of probability theory and stochastic calculus is presented in Appendix A In Appendix B some semi analytical methods for SPDEs are presented In Appendix C an introduction to Gauss quadrature is provided In Appendix D all the conclusions which are needed for proofs

are presented and in Appendix E a method to compute the convergence rate empirically is included In addition the authors provide a thorough review of the topics both theoretical and computational exercises in the book with practical discussion of the effectiveness of the methods Supporting Matlab files are made available to help illustrate some of the concepts further Bibliographic notes are included at the end of each chapter This book serves as a reference for graduate students and researchers in the mathematical sciences who would like to understand state of the art numerical methods for stochastic partial differential equations with white noise
