   Convergent Architecture Richard Hubert,2002-07-15 The only complete technical guide to building integrated business systems using the convergent architecture approach In his groundbreaking Business Engineering with Object Technology 0 471 04521 7 David Taylor introduced the concept of convergent architecture CA a framework for building the business design directly into the software systems that support it Now in this important follow up to that 1995 classic expert Richard Hubert provides systems developers and architects with their first complete blueprint for building integrated CA business systems using the hottest technologies including Enterprise JavaBeans XML UML Rational Rose and others Following a detailed introduction to the elements of CA he walks readers through the entire CA design and implementation process using examples in Java and EJB to illustrate key points Companion Website provides hands on tutorials links to related tool sites and updates to the CA methodology   **Model Driven Architecture** David S. Frankel,2003-03-25 Model Driven Architecture MDA is a new methodologyf rom OMG that uses modeling languages like UML along with programming languages like Java to build software architectures PriceWatersCoopers prestigious Technology Center just predicted that MDA will be one of the most important methodologies in the next two years Written by the lead architect of the specification who provides inside information on how MDA has worked in the real world Describes MDA in detail and demonstrates how it can work with existing methodologies and technologies such as UML MOF CWM and Web services   **Engineering Theories of Software Intensive Systems** Manfred Broy,Johannes Gruenbauer,David Harel,Tony Hoare,2005-07-15 Software engineering has over the years been applied in many different fields ranging from telecommunications to embedded systems in car and aircraft industry as well as in production engineering and computer networks Foundations in software technology lie in models allowing to capture application domains detailed requirements but also to understand the structure and working of software systems like software architectures and programs These models have to be expressed in techniques based on discrete mathematics algebra and logics However according to the very specific needs in applications of software technology formal methods have to serve the needs and the quality of advanced software engineering methods especially taking into account security aspects in Information Technology This book presents mathematical foundations of software engineering and state of the art engineering methods in their theoretical substance in the step towards practical applications to examine software engineering techniques and foundations used for industrial tasks The contributions in this volume emerged from lectures of the 25th International Summer School on Engineering Theories of Software Intensive Systems held at Marktoberdorf Germany from August 3 to August 15 2004   Common Warehouse Metamodel Developer's Guide John Poole,Dan Chang,Douglas Tolbert,David Mellor,2003-02-17 Written by the authors of the Common Warehouse Metamodel CWM specification this book is the official and authoritativedeveloper s guide Provides a comprehensive look at how to develop database anddata warehouse applications using the Common WarehouseMetamodel Covers the full development

Simulation of Interactive Distributed Systems Arne Haber,2016-09-02 Formal ADLs offer great potential to analyse the architecture of a system predict the overall performance by using simulations and allow to automatically generate parts of the implementation Nevertheless ADLs are rather not used in industrial practice since several problems hinder to exploit their potential to the full extend This thesis elaborates the design of an ADL that copes with these impediments of ADLs in practice Therefore the design of a lightweight ADL is derived which also provides well defined extension points to be adapted to a certain domain or development process Furthermore it is investigated how architectural modeling can be enriched with agile development methods to support incremental modeling and the validation of system architectures Therefore a set detailed of requirements for architectural modeling and the simulation of system architectures is defined and MontiArc a concrete ADL to model logical architectures of distributed interactive systems is derived The language is based on the mathematical FOCUS BS01 framework which allows to simulate modeled systems in an event based style Code generators and a simulation framework provide means to continuously refine and test architectural models To add new features or adapt the language to a new domain a corresponding language extension method is presented to extend the syntax language processing tools and code generators of the ADL A lightweight model library concept is presented which allows to develop and reuse component models and their implementation in a controlled and transparent way The developed language the simulator and the language extension techniques have been examined in several case studies which either used or extended MontiArc *Advancements in Model-Driven Architecture in Software Engineering* Yassine Rhazali,2020 This book prepares readers to exercise modeling and model transformation and covers state of the art research and developments on various approaches for methodologies and platforms of model driven architecture applications and software development of model driven architecture modeling languages and modeling tools Model Driven Architecture Dheeraj Reddy Thumma,2005 *An Experiment in Model Driven Architecture for E-enterprise Systems* R.
