

Convoy Protection

**Natalie Klein, Douglas Guilfoyle, Md
Saiful Karim, Rob McLaughlin**

Convoy Protection:

Exercising Control of the Sea Milan Vego, 2020-10-14 This book explains both the strategic and the operational aspects of exercising control of the sea The struggle for sea control consists of three mutually related and overlapping phases obtaining maintaining and exercising sea control It is in the phase of exercising sea control when one s strategic or operational success is exploited otherwise the fruits of victories achieved would be wasted This work describes the strategy of a stronger side in wartime after a desired degree of control has been obtained which is followed by a discussion on the objectives and main methods used in exercising sea control The remaining chapters explain and analyze in some detail each of the main methods of exercising sea control defence and protection of one s own and destruction neutralization of the enemy s military economic potential at sea capturing the enemy s operationally important positions ashore destroying weakening the enemy s military economic potential ashore and supporting one s ground forces in their offensive and defensive operations on the coast This book will be of much interest to students of strategic studies sea power and naval history

Maritime Autonomous Vehicles and International Law Natalie Klein, Douglas Guilfoyle, Md Saiful Karim, Rob McLaughlin, 2024-12-31 Maritime autonomous vehicles MAVs have the potential to radically alter all uses of maritime space with technology progressing faster than the law This book explores the current international legal framework and the options available to regulate maritime security in the face of emerging technologies MAVs are starting to play a role not only in policing and military security but also for the perpetration of maritime crimes Through discussing the existing international legal framework for combating maritime security threats the book will consider the use of MAVs by states for various security purposes and the potential dangers of MAVs in the hands of non state actors As the intersection of maritime technology with international maritime security law is crucial to a safe future for all this timely book makes essential suggestions to adapt existing legal frameworks to match emerging technologies Addressing critical questions such as who exercises jurisdiction when ships are remotely controlled how jamming technology may be lawfully deployed and what force may be permissible during maritime law enforcement this book identifies a diversity of current legal gaps and problems and makes suggestions as to how to rectify them This book will be of interest to students and scholars in the field of the law of the sea maritime security and emerging technologies

An Exploratory Analysis of Convoy Protection Using Agent-Based Simulation Matthew B. Hakola, 2004-06-01 Recent insurgent tactics during Operation Iraqi Freedom OIF have demonstrated that coalition logistical convoys are vulnerable targets This thesis examines the tactics techniques and procedures TTPs used in convoy operations in an attempt to identify the critical factors that lead to mission success A ground convoy operation scenario is created in the agent based model ABM Map Aware Non uniform Automata MANA The scenario models a generic logistical convoy consisting of security vehicles logistical vehicles an unmanned aerial vehicle UAV and an enemy ambushing force The convoy travels along a main supply route MSR where it is ambushed by a small insurgent force

We use military experience judgment and exploratory simulation runs to identify 11 critical factors within the created scenario. The data farming process and Latin Hypercube LHC experimental design technique are used to thoroughly examine the 11 factors. Using the 11 factors, 516 design points are created and data farmed over to produce 25,800 observations. Additive multiple linear regression is used to fit a model to the 25,800 observations. From the created scenario, it is concluded that convoy mission success may be determined by only a few factors; the actions of logistical vehicles are more critical than those of security vehicles. UAVs provide a statistically significant advantage, and ABMs coupled with LHCs and data farming are valuable tools for understanding complex problems.

A Treatise of the Law Relative to Merchant Ships & Seamen
