## Cool Energy:

**Cool Energy** Michael Brower, 1992 Ten years ago America's brief love affair with renewable energy sources came to an abrupt end the victim of declining oil prices and government indifference But renewable energy remains the only viable long term alternative to depletable and polluting oil gas and coal Cool Energy provides the first major review of progress in the field of renewable energy technologies solar wind biomass plant matter hydroelectric and geothermal since the mid 1980s It analyzes their near term and long term potential to displace fossil fuels and illuminates the role they could play in mitigating environmental problems such as air pollution acid rain and global warming Energy policy specialist Michael Brower argues that with the right policies renewable energy could provide as much as half of America's energy needs within forty years He identifies the market barriers that will have to be removed and argues that if the hidden costs of fossil fuels are taken into consideration renewables appear to be a cheaper source of new energy supply than fossil fuels the reliability and efficiency of their equipment have improved and the cost of installing maintaining and running renewable systems has declined Brower devotes a chapter to each renewable energy source describes its current application and discusses its costs He also analyzes new technologies under development and assesses their positive and negative attributes Introductory chapters set

renewables in the context of current energy and environmental policy and the last chapter outlines steps that can help speed the transition to a renewable energy economy Michael Brower is a physicist and holds the position of Research Director for the Union of Concerned Scientists
