Control Of Large Flexible Space Structures:

Control of Large Flexible Space Structures Suresh M. Joshi, 2014-03-12 This book is a research monograph that addresses the basic issues in controlling large flexible space structures LFSS and presents some controller synthesis methods developed by the author The main problem considered is that of controller synthesis for precision attitude control and vibration suppression in LFSS The bulk of the book presents two basic approaches for controller synthesis 1 a class of dissipative controllers which utilize collocated actuators and sensors and 2 a class of model based compensators The book will serve to stimulate research activity in control theory with application to LFSS and will be very useful to researchers practising engineers academic faculty and students in control and aerospace sciences The background required of the reader is familiarity with basic control theory including state variable methods which is generally attained at the first year postgraduate level

Ramakrishnan, 1988 **The Dynamics and Control of Large Flexible Space Structures** National Aeronautics and Space Administration (NASA), 2018-08-06 The dynamics and attitude and shape control of very large inherently flexible spacecraft systems were investigated Increasingly more complex examples were examined beginning with a uniform free free beam next a free free uniform plate platform and finally by considering a thin shallow spherical shell structure in orbit The effects devices were modeled For given sets of assumed actuator locations the controllability of these systems was first established Control laws for each of the actuators were developed based on decoupling techniques including distributed modal control pole placement algorithms and a application of the linear regulator problem for optical control theory Bainum P M and Krishna R and Kumar V K and Reddy A S S R Unspecified Center NASA CR 164982 NSG 1414 **The Dynamics and Control of Large Flexible Space Structures**, 1985

Suboptimal Control of Large Flexible Space Structures Experiencing Rotational Dynamics Nonlinearities

George David Mitroka, ARMY MILITARY PERSONNEL CENTER ALEXANDRIA VA., 1987 This report first develops a method to determine a suboptimal smooth trajectory for large flexible space structures during rotational slewing maneuvers The method consists of minimizing the quadratic integral of the corresponding second time derivative of the generalized coordinate subject to specified boundary conditions A parametric study examined the consequences of varying the number of design parameters and the number of specified boundary conditions Study results include 1 Additional degrees of freedom reduce the curvature of the trajectory reduce the peak maneuver angle rate and only slightly increase the peak rigid body torques on the structure during slewing maneuvers 2 Additional boundary conditions result in smoother transitions at the end points between targeting maneuvers and increase the peak maneuver angle rate and rigid body torques by a larger percentage than do additional design parameters Next planar dynamics equations of motion for a uniform inextensible cantilevered beam capable of small transverse deformations and which retain the rotational centrifugal nonlinearities are derived via Newton's Laws nondimensionalized and cast into a form suitable for numerical integration The Decentralized Control of Large Flexible Space Structures George Stuart West-Vukovich, 1983 **Balanced Realization Model Reduction and LQG Control of Large Flexible Space Structures** Jason Albright Fowler, 1994 **Scientific and Technical Aerospace Reports** , 1987 Lists citations with abstracts for aerospace related reports obtained from world wide sources and announces documents that have recently been entered into the NASA Scientific and Technical Information Database **Semi-annual Progress Report on Distributed Active Control of Large Flexible Space Structures** , 1986
