The Effect of Cooperative Learning on Science Achievement and Attitudes Toward Science in the Third Grade Layal Moussa Kameh, American University of Beirut. Faculty of Arts and Sciences. Department of Education, 2009 Research findings have determined that teaching methods among other factors have an impact on elementary students science achievement Educators have been striving to devise teaching methods to improve science outcomes A variety of teaching strategies that involve hands on activities and that allow students to be more independent learners have been designed to be used in science classrooms One of those methods is cooperative learning Proponents argue that by working with others and sharing their experiences one can see different points of view and can thereby maximize learning as well as developing interpersonal and communication skills Many educators believe that this is an effective method because this is the way that scientists and engineers work The review of the literature revealed unresolved disagreement concerning the effect of cooperative learning Research showed that cooperative learning can have a positive negative or no effect on learners academic achievement In addition to that there was a scarcity of research on cooperative elementary science in general and lower elementary science in particular The purpose of this study was to investigate the effect of cooperative learning on elementary students science achievement attitudes towards science and attitudes towards cooperative learning In addition to that the study investigated the challenges that the teachers face during cooperative learning A sample of 34 students from two grade 3 classes in a private school in Beirut city participated in this experimental descriptive study whereby a science unit was taught to the two classes using two different methodologies Cooperative learning experimental group and direct instruction control group Pre and post tests were administered to both groups to compare students achievement before and after the intervention and an attitude questionnaire was administered at the same time Later the focus group approach was used to investigate their attitudes towards science and cooperative learning In addition to that the teacher was interviewed to discuss her role and the challenges that she faces when cooperative learning is implemented Results of the study showed that cooperative learning had no effect on students science achievement However it had a significant *Effects of Cooperative Learning Strategies on Achievement in Science* Judy L. Cooperative Learning Shlomo Sharan, 1990-03-09 This collection of theoretical and empirical research addresses the most recent advances in cooperative learning and its applications implications and effects on teachers and students at both the elementary and secondary levels The central concern of the contributors is how a set of particular instruction methods affects people in classrooms and what this form of instruction contributes or fails to contribute to them In their attempt to illuminate some of the major effects of cooperative learning methods the contributors discuss a number of theoretical and practical issues not covered elsewhere including the effects of cooperative learning on teachers on high school science studies on student motivation and on the acquisition of group process and learning skills Educational psychologists and researchers as well as teachers in training will find Cooperative Learning an illuminating source of information about a model of teaching that the contributors argue produces a wide range of positive effects on both the teacher and student populations Taken together these chapters demonstrate a wider applicability and more socially and psychologically important impacts of cooperative learning than have been documented before Among the topics addressed are cooperative learning and achievement treating status problems in the cooperative classroom cooperative learning models teachers verbal behavior in cooperative and whole class instruction and the effects of cooperative learning on ethnic relations The contributors are united in their belief that cooperative learning promises to provide a viable alternative to the predominantly verbal presentation type of teaching that is still the norm in most Western classrooms The research reported here will help establish a central role for cooperative learning methods in the training and practice of classroom instruction as we enter the 1990s
