

The background of the cover features a series of vertical lines of varying heights, creating a textured, architectural effect. In the upper half, a large, dark brown semi-circle is positioned. Inside and around this semi-circle are numerous squares of different sizes and orientations. Some squares are solid dark brown, while others are white outlines. They appear to be falling or floating, with a higher concentration of squares near the top left and a trail of smaller squares extending towards the right side of the semi-circle.

Coordination Chemistry Of Macrocyclic Compounds:

Coordination Chemistry of Macrocyclic Compounds Gordon Melson, 2012-12-06 Chemists have been aware of the existence of coordination compounds containing organic macrocyclic ligands since the first part of this century however only during the past few years have they expanded research into the chemistry of these compounds The expansion was initiated in the early 1960s by the synthesis and characterization of compounds containing some new macrocyclic ligands The synthesis of compounds which may serve as model systems for some natural products containing large rings as ligands provided the main goal for the early expansion of research effort indeed a recurrent theme behind much of the reported chemistry has been the analogy between synthetic macrocyclic compounds and many natural product systems More recently the emphases of reported research have ranged over the whole spectrum of chemistry and the number of publications that discuss macrocyclic chemistry has increased at a dramatic rate The completed research has been reported in a variety of journals throughout the world but there has been no previous attempt to bring the major developments together under one cover This book therefore attempts to satisfy the need for a single source in which there is both a collection and a correlation of information concerning the coordination chemistry of macrocyclic compounds The chapters in this book discuss various aspects of macrocyclic chemistry and while these chapters as a whole constitute an in depth survey of the state of the art of the field each chapter is written as a complete unit

Coordination Chemistry of Macrocyclic Compounds Edwin C. Constable, 2023 Coordination Chemistry of Macrocyclic Compounds describes the coordination chemistry of macrocyclic ligands Common types of ligands are introduced and strategies for the synthesis of the free ligands and their metal complexes are discussed The unique thermodynamic and kinetic properties of macrocyclic complexes are discussed and applications of the ligands presented

Chemical Reactions in Organic and Inorganic Constrained Systems R. Setton, 1986-02-28 The basic idea of the NATO International Exchange Program for funding an Advanced Research Workshop on Chemical Reactions in Organic and Inorganic Constrained Systems was to contribute to a better understanding of the influence of configurational constraints on reaction mechanisms as imposed on reagents by organic or inorganic templates The original character of the Workshop was to bring together organic and inorganic chemists with this common interest in order to promote the exchange of ideas and eventually interdisciplinary research All the participants to the Workshop agreed that the discussions were stimulating and fruitful The judgement of the reader of the Proceedings may perhaps be more restrictive because the director Professor J J FRIPIAT and co director Professor P SINAY faced with the impossible task of covering such an enormous domain were obliged to select somewhat arbitrarily a limited number of topics which seemed to them to be the most important Their choice may be discussed and there surely are important gaps with fields which were not considered However both organisers believe that within the limited span of time and number of contributors most of the exciting areas were addressed Dr WARNHEIM was kind enough to write a commentary on the Workshop his summary written with the hindsight of a few weeks supports we believe this opinion Dr SETTON has accepted the burden of collecting and shaping not selectively the manuscripts This book would not be what it is without his efficient contribution as scientific secretary of the Workshop
