Coordination Polymerization A Memorial To Karl Ziegler:

Coordination polymerization James C.W. Chien,2012-12-02 Coordination Polymerization contains the proceedings of a symposium sponsored by the American Chemical Society and held at the University of California Los Angeles on April 3 1974 The papers explore developments in coordination polymerization and cover topics ranging from stereoselection and stereoelection in olefin polymerization to heterogeneous Ziegler Natta polymerization transition metal alkyl polymerization catalysts chain transfer in Ziegler type polymerization of ethylene and stereospecific polymerization of diolefins by η^3 allylic coordination complexes This book is comprised of 13 chapters and begins with a discussion on Karl Ziegler's major contributions to the chemistry of free radicals organo alkali metal compounds many membered rings and organotransition metallic compounds The next two chapters focus on the origin of steric control in the polymerization of olefins with emphasis on stereoselection and stereoelection as well as the influence of the chirality of the transition metal on the stereoregularity of the resulting polymer The problem of counting active sites is then addressed and results obtained with various methods are compared The mechanisms of initiation propagation termination and transfers in polymerizations by $C_5H_5)_2TiCl_2$ catalysts are also considered along with polymerizations by allyl benzyl trimethylsilylmethyl and other derivatives of Ti and Zr The last three chapters examine the kinetics of Ziegler Natta polymerization the Langmuir adsorption mechanism supported Ziegler Natta catalysts factors that affect the stereoregularity of polymerization of propylene by supported catalysts and polymerizations of diolefins to equibinary polymers by η^3 allylic coordination complexes This monograph will be of interest to chemists as well as polymer scientists and engineers Coordination Polymerization James C. Coordination Polymerization James C. W. Chien,1974 Coordination Polymerization. A Memorial to Karl Ziegler. Proceedings of a Symposium at the 167.national Meeting of the American Chemical Society, ACS, University of California, Los Angeles, Calif. 1974. W. Chien ,1975 **Transition Metal Catalyzed Polymerizations** Roderic P. Quirk,1983 **The Essential Handbook of Polymer Terms and Attributes** Munmaya K Mishra,Biao Duan,2024-07-30 The Essential Handbook of Polymer Terms and Attributes not only acts as an encyclopaedia of polymer science but also fosters an appreciation for the significance of polymers in fields including materials science chemistry engineering and medicine This book serves as an excellent reference book covering every possible term and attribution associated with the vast and diverse field of polymers This comprehensive volume serves as a vital resource for researchers working in industry and academia offering a clear and concise exploration of polymer science with the most essential reference data available Each polymer term is defined in a straightforward manner ensuring that readers of all levels can grasp the concepts The book goes beyond mere definitions providing context and insights into the applications properties and synthesis Bringing polymer terms and attributes together in one place the book provides a broad knowledge of polymer science and facilitates idea generation for researchers and students embarking on projects related to a specific field of polymer science Key features This book covers

all possible terms associated with the field of polymers and related areas granting readers a comprehensive understanding of the entire spectrum of polymers The organization of the book follows an alphabetical format enabling quick and convenient access to specific terms Each polymer term is clearly defined with a figure or scheme as needed allowing readers to visualize the structures processes and applications involved This book is written for science students chemists polymer scientists chemical engineers pharmaceutical scientists biomedical scientists biotechnologists product formulators materials scientists and scientists working on polymers

Hydrocarbon Chemistry, 2 Volume Set George A. Olah, Arpad Molnar, G. K. Surya Prakash, 2017-10-02 This book provides an unparalleled contemporary assessment of hydrocarbon chemistry presenting basic concepts current research and future applications Comprehensive and updated review and discussion of the field of hydrocarbon chemistry Includes literature coverage since the publication of the previous edition Expands or adds coverage of carboxylation sustainable hydrocarbons extraterrestrial hydrocarbons Addresses a topic of special relevance in contemporary science since hydrocarbons play a role as a possible replacement for coal petroleum oil and natural gas as well as their environmentally safe use Reviews of prior edition literature coverage is comprehensive and ideal for quickly reviewing specific topics of most value to industrial chemists Angewandte Chemie and useful for chemical engineers as well as engineers in the chemical and petrochemical industries Petroleum Science and Technology

Hydrocarbon Chemistry George A. Olah, Árpád Molnár, 2003-09-10 Hydrocarbons and their transformations play major roles in chemistry as raw materials and sources of energy Diminishing petroleum supplies regulatory problems and environmental concerns constantly challenge chemists to rethink and redesign the industrial applications of hydrocarbons Written by Nobel Prize winner George Olah and hydrocarbon expert Arpad Molnar the completely revised and expanded Second Edition of Hydrocarbon Chemistry provides an unparalleled contemporary assessment of the field presenting basic concepts current research and future applications Hydrocarbon Chemistry begins by discussing the general aspects of hydrocarbons the separation of hydrocarbons from natural sources and the synthesis from C1 precursors with recent developments for possible future applications Each successive chapter deals with a specific type of hydrocarbon transformation The Second Edition includes a new section on the chemical reduction of carbon dioxide focusing on catalytic ionic electrocatalytic photocatalytic and enzymatic reductions as well as a new chapter on new catalysts and activation methods combinatorial chemistry and environmental chemistry Other topics covered include Major processes of the petrochemical industry such as cracking reforming isomerization and alkylation Derivation reactions to form carbon heteroatom bonds Hydrocarbon oxidations Metathesis Oligomerization and polymerization of hydrocarbons All chapters have been updated by adding sections on recent developments to review new advances and results Essential reading for practicing scientists in industry polymer and catalytic chemists as well as researchers and graduate students Hydrocarbon Chemistry Second Edition remains the benchmark text in its field

Homogeneous and Heterogeneous Catalysis, 1986-06 This Proceedings contains plenary lectures and selected

poster communications spanning the entire field of catalysis from catalysis by protons to catalysis by multinuclear clusters and ultra disperse particles It includes discussion of the recent results of fundamental research conducted at the juncture between homogeneous and heterogeneous catalysis New ideas based on modern physical and quantum chemical methods and concerning the mechanism of formation and functioning of active sites of catalysts are suggested It is shown how the cyclic change of atomic distribution in the active site occurs during catalytic transformations In addition the Proceedings report new data on methods of assembling molecularly organized catalytic systems and on the mechanisms of their action The various problems such as the effect of strong metal support interaction migration of atoms in active sites and design of catalytic properties of substances are also widely discussed Similarities and differences in mechanisms of action of homogeneous and heterogeneous catalysts are considered using as examples CO hydrogenation hydrogenolysis of saturated hydrocarbons selective hydrogenation and oxidation of olefins metathesis and polymerization of olefins hydrosilylation and hydroformylation of olefins etc

Transition Metals and Organometallics as Catalysts for Olefin Polymerization

Walter Kaminsky, Hansjörg Sinn, 2012-12-06 More than 30 years after the discovery of transition metals and organometallics as catalysts for olefin polymerization these catalysts did not have lost their fascination Since 1953 when Karl Ziegler has discovered the catalytic polymerization of ethylene leading to plastically formable polymers which are mechanically stable up to temperatures of about 100 C synthetic polymers and rubbers have made their way right into private houses This discovery has been a main impetus for the fast growing production of plastics The stereoselective polymerization of propylene and other long chain olefins first detected by Giulio Natta leads to an even broadened field of applications Another enforcing factor were the developments of Standard Oil of Indiana and Phillips Petroleum Company who engaged in the polymerization of olefins supported molybdenum cobalt and later on chromium catalysts which clearly indicates the wide variety of suitable systems This kind of research acknowledged merit when in 1963 the Nobel prize of chemistry was awarded to Ziegler and Natta Although to a great extent there is a technical application for these catalysts up to now the nature of the active centres and many reaction mechanisms are not completely known

History of Polyolefins Raymond Benedict Seymour, 1986 The word Polyethylene was probably

first pronounced in a lecture which M P E Berthelot delivered on April 27 1863 to the Chemical Society in Paris reporting on the polymerization of various simple organic compounds 1 Much later this work appeared twice in the literature before the classical ICI breakthrough in the 1930 s which is so colorfully described in Ballard s lecture Once it came up at the end of the last century when H von Pechmann obtained a white flocculant material from the decomposition of diazomethane which one year later was termed to be polymethylene CH from E Bamberger 2 and F Tschiemer 1 At that time the investigators were disappointed about this product because it was not what they had expected to find in their experiments As a result any further work was discontinued The second time that the word polyethylene appeared in the literature to describe a white solid powder was in 1930 when C S Marvel and M E P Friedericks 2 attempted to prepare alkylated As compounds in which all five valencies were covalently bonded to five monovalent alkyl groups They reacted Tetra ethyl arsenium bromide with butyllithium and expected to get tetra ethyl butyl arsenium Instead they obtained LiBr AsEt₃ gaseous products Delicate and somewhat time consuming analysis gave a surprising result ethane and C s were there in the 4 expected quantities but ethylene was missing or almost missing in the gas mixture
