*Countering Weapons of Mass Destruction* Albert J. Mauroni, 2016-10-12 The Cold War phrase weapons of mass destruction continues to be used despite significant changes in international political cultures military concepts of operation and technology advances Today the term weapons of mass destruction WMD is used to address many things from grams of ricin and barrels of industrial chemicals to megaton nuclear weapons As a direct result of the decision to refer to all nuclear biological and chemical NBC weapons as well as biological chemical and radiological CBR hazards as WMD we have lost the ability to accurately develop assess and discuss policy concerns relating to the contemporary use of unconventional weapons on the battlefield and within the homeland This book uses a public policy framework to examine how the U S government and in particular the U S military should address the potential use of unconventional weapons in the 21st century It defines the problem identifies the policy actors and reviews policy options It discusses past policy efforts before offering a critical review of current strategies and how WMD issues are integrated into the current military Joint Operating Concepts deterrence cooperative security major combat operations irregular warfare stability and homeland security and proposes new national framework for countering WMD The aim is to answer such questions as what does counterproliferation mean and whether the U S government is adequately prepared to protect U S citizens and its armed forces from adversaries developing unconventional weapons      Nuclear Superiority David S. McDonough, 2013-02-01 In 2002 the Bush administration completed a Nuclear Posture Review that introduced a new triad based on offensive strike systems defences and a revitalized defence infrastructure The new triad is designed for a new strategic threat environment characterized not by a long standing nuclear rivalry with another superpower but by unstable relationships with rogue state proliferators alongside more ambiguous relations with nuclear weapon powers Providing a historical context to these modifications to US nuclear strategy Nuclear Superiority details how the new triad which strongly emphasizes the need to bolster the credibility of the nuclear deterrent and to prepare for nuclear use when deterrence fails is founded on previous efforts to secure nuclear superiority against the Soviet Union and counter proliferation capabilities against WMD proliferant adversaries It illustrates how the evolution of American nuclear strategy towards more effective counter force capabilities regardless of the current threat environment has led to a host of counter force developments David S McDonough explores how this strategy is based on the long standing American desire to control conflict escalation and how it may invite crisis instability with regional adversaries and disquiet among established nuclear powers      Current Contents Arts and Humanities ,1995      **East and South-East Asia** Andrew T. H. Tan, 2013-07-03 The economic growth of East and South East Asia in the context of the global financial crisis has strengthened the view that this region is emerging in the 21st century as the most economically vibrant region in the world With some of the largest economies and generally high economic growth rates compared to the rest of the world it is unsurprising that East and South East Asia has become the subject of global interest East Asia s rise inevitably focuses

attention on the issue of China's emergence as a regional and global power. Such a prospect challenges the current status quo in which the region is dominated by the USA and its regional allies and issues in Sino-US strategic relations have raised global awareness of the need to understand this pivotal region better. In addition, the Taiwan issue continues to evoke nationalist sentiments in China and North Korea continues to threaten regional stability. Non-traditional or alternative security issues are also of major importance in the region including natural disasters and epidemics as well as challenges relating to human rights and governance, transnational crime, demographic issues, economics and trade, and regionalism. This Handbook aims to offer an insight into these issues. The volume is divided into two main sections. The first, *International Relations and Security Perspectives*, will focus on the international relations of the region, paying special attention to the key state players. The chapter contributions will examine the security perspectives and foreign and defence policies of these states as well as key bilateral relationships. The second section will examine key *Regional Non-traditional Security Issues* including globalization, transnational health challenges, population growth and the environment.

**Strategic Review**, 1987 dedicated to the advancement and understanding of those principles and practices military and political which serve the vital security interests of the United States.

**Deadly Cultures** Mark Wheelis, Lajos Rózsa, Malcolm Dando, 2006-01-30. *Deadly Cultures* offers an historical analysis of biological weapons since 1945 and addresses three central issues: why states have continued or begun programs for acquiring biological weapons; why states have terminated such programs; and how states have demonstrated that they have truly terminated their biological weapons programs.

*V Bombers* Tony Redding, 2025-11-04. A sobering and necessary read for all those interested in Cold War history. Much has been written about the V bombers, the Valiant, Victor and Vulcan, but virtually nothing has been said about their strategic nuclear strike role. How would Britain's small force of subsonic bombers have retaliated following a Soviet attack? Would they have succeeded in visiting thermonuclear catastrophe on their Soviet targets? *V Bombers: Britain's Nuclear Frontline* is the first detailed account of the operational capability and credibility of Britain's airborne nuclear deterrent during the peak years of the Cold War. This book is the product of six years of research by the author, Dr Tony Redding. It includes a great deal of fresh material on V force weapons, war mission, targeting vulnerabilities and tactics for attacking targets within Soviet Russia. Over 70 V force aircrew and ground crew were interviewed and over 300 operational research reports and other official documents were reviewed. This book demonstrates how the V bombers retained a unilateral capacity to destroy the largest cities in the Soviet Union until the handover of the strategic nuclear deterrent to the Polaris submarines in 1969. It concludes that a small force of surviving V bombers could have unleashed the explosive power of all Allied bombs dropped on Germany in six years of war, but in the space of the first two hours of World War 3. A sobering thought and a fascinating and necessary read for all those interested in this period of history.
