Stephen Billett, Amanda J. Henderson, 2011-02-12 In higher education institutions across the globe there is a growing interest in integrating classroom learning with experience in practice settings This interest is the result of an increased emphasis on courses that prepare students for specific occupations in the hopes that upon graduation students will be job ready

Developing Learning Professionals Integrating Experiences in University and Practice Settings explores how the integration of student experiences across university and practice settings might best be used to produce college graduates who are adept critical practitioners To do so it draws on the findings of a series of projects in Australia that investigated diverse aspects of work related learning Through these projects a range of scholars and researchers consider different aspects of this educational initiative within the same national higher education context They address pedagogic and curriculum practices institutional arrangements and partnerships of varying kinds and a consolidated set of perspectives Learning Through Practice

Stephen Billett, 2010-06-17 Practice based learning the kind of education that comes from experiencing real work in real situations has always been a prerequisite to qualification in professions such as medicine However there is growing interest in how practice based models of learning can assist the initial preparation for and further development of skills for a wider range of occupations Rather than being seen as a tool of first time training it is now viewed as a potentially important facet of professional development and life long learning This book provides perspectives on practice based learning from a range of disciplines and fields of work The collection here draws on a wide spectrum of perspectives to illustrate as well as to critically appraise approaches to practice based learning The book s two sections first explore the conceptual foundations of learning through practice and then provide detailed examples of its implementation Long standing practice based approaches to learning have been used in many professions and trades Indeed admission to the trades and major professions e g medicine law accountancy can only be realised after completing extended periods of practice in authentic practice settings However the growing contemporary interest in using practice based learning in more extensive contexts has arisen from concerns about the direct employability of graduates and the increasing focus on occupation specific courses in both vocations and higher education It is an especially urgent issue in an era of critical skill shortages rapidly transforming work requirements and an aging workforce combined with a looming shortage of new workforce entrants We must better understand how existing models of practice based learning are enacted in order to identify how they can be applied to different kinds of employment and workplaces The contributions to this volume explore ways in which learning through practice can be conceptualised enacted and appraised through an analysis of the traditions purposes and processes that support this learning including curriculum models and pedagogic practices
