## **Developing Thinking In Statistics:**

**Developing Thinking in Statistics** Alan Graham, 2006-03-03 This book should prove to be an important addition to the relatively few publications that exist on statistical thinking. It very nicely encourages the reader to take an active learning approach through simultaneously promoting pedagogy with knowledge and skills enhancement in statistics. Understanding what the subject is for and what it can do are crucial in statistical education by getting the reader to think statistically. Mr Graham has provided us with a very readable book that helps to dispel the poor reputation that statistics has acquired over many years. Professor Neville Davies, Director Royal Statistical Society Centre for Statistical Education, Nottingham Trent University. Statistics is a key area of the school mathematics curriculum where maths and the real world meet. Although potentially a subject where teaching can be motivating and relevant to everyday concerns, it is often seen as boring and involving largely mechanical calculations. This book will enable teachers and others interested in statistical thinking to become excited and inspired by the big ideas of statistics and in turn teach them enthusiastically. Designed to heighten awareness of statistical ideas, the book explores key themes within statistics using ideas developed by the influential team at The Open University's Centre for Mathematics Education. Themes include Measurement, Variation, Randomness, Uncertainty. Arranged in an accessible task-based format, this is an essential text for all secondary maths teachers and students of maths education. It is a comprehensive book that will illuminate and inspire interest in the subject based on innovative use of ICT, engaging narrative, firm research, and good practice. **Developing Thinking in Statistics** is a set book on the Open University Course ME626 Developing Statistical Thinking, part of the Graduate Diploma in Mathematics Education.
