Mathematical Problems from Applied Logic I presents chapters from selected world renowned logicians. Important topics of logic are discussed from the point of view of their further development in light of requirements arising from their successful application in areas such as Computer Science and AI language. An overview of the current state as well as open problems and perspectives are clarified in such fields as non standard inferences in description logics, logic of provability, logical dynamics and computability theory. The book contains interesting contributions concerning the role of logic today including some unexpected aspects of contemporary logic and the application of logic.

Mathematics of the 19th Century A.N. Kolmogorov, Adol'f Pavlovich Ilyashkevich, 2001-03. This multi authored effort *Mathematics of the nineteenth century* to be followed by *Mathematics of the twentieth century* is a sequel to the *History of mathematics from antiquity to the early nineteenth century* published in three volumes from 1970 to 1972. For reasons explained below our discussion of twentieth century mathematics ends with the 1930s. Our general objectives are identical with those stated in the preface to the three volume edition i.e. we consider the development of mathematics not simply as the process of perfecting concepts and techniques for studying real world spatial forms and quantitative relationships but as a social process as well. Mathematical structures once established are capable of a certain degree of autonomous development. In the final analysis however such immanent mathematical evolution is conditioned by practical activity and is either self directed or as is most often the case is determined by the needs of society. Proceeding from this premise we intend first to unravel the forces that shape mathematical progress. We examine the interaction of mathematics with the social structure, technology, the natural sciences and philosophy. Through an analysis of mathematical history proper we hope to delineate the relationships among the various mathematical disciplines and to evaluate mathematical achievements in the light of the current state and future prospects of the science. The difficulties confronting us considerably exceeded those encountered in preparing the three volume edition.
