The Shape of Thought Richard H.R. Harper, 2025-11-14 Artificial intelligence AI consists of a dazzling set of computational tools that few fully understand From our cars to our homes to how we socialize and work AI is everywhere and makes life so much better It might irritate in some instances but mostly it helps Or it seems to Yet AI developers have an unusually narrow perspective on intelligence reducing all judgments to a calculus Machines excel at this form of intelligence but it is not how most people define the word While this narrowing has provided useful direction for the development of computers Richard Harper argues it also constrains what people are capable of When we reach for AI to help us unwind

connect with others or even create art it is not analytical intelligence that we are after The human behaviours that AI seeks to supplement are shaped as much by mood morals indolence and interrelation as they are by calculation Drawing on three decades of inquiry Harper reveals that when we are misled about what AI cannot do we fail to see what it can The Shape of Thought shows how to break free from this narrow view By better understanding the many different things that people achieve with computers we can improve and diversify AI to allow for richer more beneficial human computer interaction
