Japanese Technical Abstracts ,1986 **Why Machines Will Never Rule the World** Jobst Landgrebe, Barry Smith, 2022-08-12 The book s core argument is that an artificial intelligence that could equal or exceed human intelligence sometimes called artificial general intelligence AGI is for mathematical reasons impossible It offers two specific reasons for this claim Human intelligence is a capability of a complex dynamic system the human brain and central nervous system Systems of this sort cannot be modelled mathematically in a way that allows them to operate inside a computer In supporting

their claim the authors Jobst Landgrebe and Barry Smith marshal evidence from mathematics physics computer science philosophy linguistics and biology setting up their book around three central questions What are the essential marks of human intelligence What is it that researchers try to do when they attempt to achieve artificial intelligence AI And why after more than 50 years are our most common interactions with AI for example with our bank s computers still so unsatisfactory Landgrebe and Smith show how a widespread fear about AI s potential to bring about radical changes in the nature of human beings and in the human social order is founded on an error There is still as they demonstrate in a final chapter a great deal that AI can achieve which will benefit humanity But these benefits will be achieved without the aid of systems that are more powerful than humans which are as impossible as AI systems that are intrinsically evil or able to will a takeover of human society *Artificial Intelligence Abstracts* ,1988 **Mechanical Engineering** ,1984-06 Discovering Computers 2002
