A. Schultz, 2022-01-30 Detection canines have been utilized throughout the world for over a century and while numerous attempts have been made to replicate the canine's ability to detect substances by mechanical means none has been as successful. The olfactory system is a highly intricate and sophisticated design for chemical sensing and the olfactory capacity of many animals including canines is considered unmatched by machine due to not only their great sensitivity and superior selectivity but also their trainability and mobility. These unique features have led to the use of such animals as whole animal biosensors. Amplifying the benefits and diminishing the limitations of detection canines interdisciplinary research is crucial to understanding canine olfaction and detection and enhancing this powerful and complex detector. The past 50 years have produced vast advancements in animal behavior training technology to develop canines into more proficient and reliable sensors while scientific research has provided tremendous support to help practitioners better understand how to utilize this powerful sensor. This book assembles a diverse group of authors with expertise in a variety of fields relating to detection canines and the chemical sensing industry including both research and operational perspectives on detection canines. It illustrates how science enhances our understanding of how canines are employed for solving some of the world's leading detection challenges.

Human Remains Detection Ritchie Callaghan, 1999 Human Remains detection. Cadaver dogs are being utilised throughout the United States and Great Britain as aids to forensic investigations. Their skills in identifying remains sites can save a great deal of manpower and cost and decrease response times in important investigations. The present study involved training Queensland Police Dog Geordie to recognise decaying human scent using a pseudo corpse, chemical cadaver clothing and finally real human remains. The success of the training was evaluated by testing the ability of the dog to detect training chemicals and then real human remains.

Biological Affinity in Forensic Identification of Human Skeletal Remains Gregory E. Berg, Sabrina C. Ta'ala, 2014-12-13 Ancestry determination in the identification of unknown remains can be a challenge for forensic scientists and anthropologists especially when the remains available for testing are limited. There are various techniques for the assessment of ancestry ranging from traditional to new microbiological and computer assisted methods.
