Development And Perspectives Of Landscape Ecology:

Development and Perspectives of Landscape Ecology O. Bastian, Uta Steinhardt, 2013-03-14 Development and status of landscape ecology subject of this book During the last decades landscape ecology has developed tremendously It concerns both the theoretical basis and practical application The roots of landscape ecology are geography and biology The term landscape ecology was first coined by the German scientist Carl Troll in 1939 once the development center of landscape ecology was in Central Europe Recently also other parts of the world became powerful centers of landscape ecology especially Northern America American approaches partly differ essentially from the European because they are focused especially on biogeography and population dynamics In Europe however the geographical roots of landscape ecology play a major role Landscape is defined as a complex of abiotic biotic and human components Mainly due to linguistic barriers the international discussion does not take notice of approaches and experiences from non anglophone countries in a sufficient manner Therefore this book considers more the German and European views on landscape ecology than the books which were published before It tries to bridge the gaps between theory and practice of landscape ecology as well between the German European and American approaches The book gives a fundamental representation of landscape ecology which proves to be a young but an interesting and very important transdisciplinary science for the solution of environmental problems Both the theoretical basis and practical application of landscape ecology are considered **Landscape Perspectives** Marc Antrop, Veerle Van Eetvelde, 2017-12-19 Climb a mountain and experience the landscape Try to grasp its holistic nature Do not climb alone but with others and share your experience Be sure the ways of seeing the landscape will be very different We experience the landscape with all senses as a complex dynamic and hierarchically structured whole The landscape is tangible out there and simultaneously a mental reality Several perspectives are obvious because of language culture and background Many disciplines developed to study the landscape focussing on specific interest groups and applications Gradually the holistic way of seeing became lost This book explores the different perspectives on the landscape in relation to its holistic nature We start from its multiple linguistic meanings and a comprehensive overview of the development of landscape research from its geographical origins to the wide variety of today's specialised disciplines and interest groups Understanding the different perspectives on the landscapes and bringing them together is essential in transdisciplinary approaches where the landscape is the integrating concept *Ecological Landscape Design and Planning* Jala Makhzoumi, Gloria Pungetti, 2003-09-02 The authors of this book offer an holistic methodological approach to the design and planning of landscape based on both research and practical experience **Complexity in Landscape Ecology** David G. Green, Nicholas I. Klomp, Glyn Rimmington, Suzanne Sadedin, 2020-07-02 This book examines key concepts and analytical approaches in complexity theory as it applies to landscape ecology including complex networks connectivity criticality feedback and self organisation It then reviews the ways that these ideas have led to new insights into the nature of

ecosystems and the role of processes in landscapes The updated edition explores innovations in ecotechnology including automated monitoring big data simulation and machine learning and shows how they are revolutionizing ecology by making it possible to deal more effectively with complexity Addressing the topic in a progression of ideas from small to large and from simple to sophisticated the book examines the implications of complexity for major environmental issues of our time particularly the urgencies of climate change and loss of biodiversity Understanding ecological complexity is crucial in today's globalized and interconnected world Successful management of the world's ecosystems must combine models of ecosystem complexity with biodiversity environmental geographic and socioeconomic data The book examines the impact of humans on landscapes and ecosystems as well as efforts to embed sustainability commerce and industrial development in the larger context of ecosystem services and ecological economics Well established as researchers in the field the authors provide a new perspective on current and future understanding of complexity in landscape ecology The new edition offers a non technical account of the topic so it is both accessible and informative for general readers For students of ecology it provides a fresh approach to classical ideas

Landscape Ecological Analysis Jeffrey M. Klopatek, Robert H. Gardner, 2012-12-06
Studies in landscape ecology focus on the effect of heterogeneity on ecosystem structure and function Vigorous growth in the field has included the development of methods and results that can be applied to an impressive range of environmental issues The purpose of this book is to provide the reader with a current perspective on this rapidly developing science This book features contributions by internationally renowned experts in the field that address a broad spectrum of political theoretical and applied aspects of the subject Chapters describe a number of methods and models that are used at landscape and regional scales within the context of ecosystem management to assess changes in biodiversity and to evaluate sustainable landscape planning for cultural as well as natural settings Also included are instructional models to assist in teaching

Environmentalism in Landscape Architecture Michel Conan, 2000 The papers presented in this volume range from proposals for new design approaches historical analysis of the relationship between the practice of landscape architecture and environmentalism to the theories of early practitioners of landscape architecture imbued by an environmentalist outlook The issues above are addressed through topics as eclectic as the design of American zoos the establishment of the Tennessee Valley Authority road design and maintenance in Texas and criticism of relationships between the words and works of select landscape architects This volume provides a fresh approach to encounters between environmentalism and landscape architecture by reframing the issues through self reflection instead of strategic debate

emergence of landscape ecology its current status as a new integrative science and how distinguished scholars in the field of landscape ecology view the future regarding new challenges and career opportunities Over the past thirty years landscape ecology has utilized development in technology and methodology e g satellites GIS and systems technologists to monitor large temporal spatial scale events and phenomena These events include changes in vegetative cover and composition due to both natural disturbance and human cause changes that have academic economic political and social manifestations There is little doubt due to the temporal spatial scale of this integrative science that scholars in fields of study ranging from anthropology to urban ecology will desire to compare their fields with landscape ecology during this intellectually and technologically fertile time History of Landscape Ecology in the United States brings to light the vital role that landscape ecologists will play in the future as the human population continues to increase and fragment the natural environment Landscape ecology is known as a synthesized intersection of disciplines but new theories concepts and principles have emerged that form the foundation of a new transdiscipline *Towards the Development of Spatially Unbiased Landscape Fragmentation Indices* Dante Gideon K. Foundation Papers in Landscape Ecology John A. Wiens, 2007 The editors begin with articles that illuminate the discipline's diverse scientific foundations such as L **Landscape Ecology in Theory and Practice** Monica G. Turner, Robert H. Gardner, 2015-10-29 This work provides in depth analysis of the origins of landscape ecology and its close alignment with the understanding of scale the causes of landscape pattern and the interactions of spatial pattern with a variety of ecological processes The text covers the quantitative approaches that are applied widely in landscape studies with emphasis on their appropriate use and interpretation The field of landscape ecology has grown rapidly during this period its concepts and methods have matured and the published literature has increased exponentially Landscape research has enhanced understanding of the causes and consequences of spatial heterogeneity and how these vary with scale and they have influenced the management of natural and human dominated landscapes Landscape ecology is now considered mainstream and the approaches are widely used in many branches of ecology and are applied not only in terrestrial settings but also in aquatic and marine systems In response to these rapid developments an updated edition of *Landscape Ecology in Theory and Practice* provides a synthetic overview of landscape ecology including its development the methods and techniques that are employed the major questions addressed and the insights that have been gained **Landscape Ecology** Dean L. Urban, 2024-12-01 This is methods tools textbook that covers the fundamental tasks in research and management at the landscape scale It brings together tools from a range of disciplines and presents them in a natural workflow that a practitioner can appreciate Alternative texts cover a narrower range of topics and or present the information without reference to a natural workflow The book begins with 2 fundamental applications that introduce the scope and challenges of working at the landscape scales sampling design and species distribution modeling These motivate several chapters that

digress to cover the primary tools that ecologists use to work with multivariate and spatial data The book then returns to applications including site prioritization interpreting and forecasting landscape change and integrated assessment The tasks themselves follow a logical workflow of collecting and analyzing data applying the analyses to management decisions and interpreting the outcomes of these decisions in an integrated framework This book stems from two graduate level courses in Landscape Ecology taught at the Nicholas School of the Environment at Duke University The subject has evolved over time from a concepts based overview of what landscape ecology is to a more applied practicum on how one does landscape ecology As landscape ecology has matured as a discipline its perspectives on spatial heterogeneity and scale have begun to permeate into a wide range of other fields including conservation biology ecosystem management and ecological restoration Thus this textbook will bring students from diverse backgrounds to a common level of understanding and will prepare them with the practical knowledge for a career in conservation and ecosystem management

Landscape Ecology in Action Almo Farina, 2000-07-31 This book presents the state of the art of the fundamentals of landscape ecology It integrates different ecological approaches in which the spatial arrangement of living organisms and their aggregations are considered as an important component of environmental complexity A reconciliation between the ecosystem approach and the landscape approach is discussed Geobotanical animal and human perspectives are considered and compared with regional broad scale process oriented landscape ecology It presents methods and applications for land evaluation and management of the real world with particular emphasis on the scalar property of ecological processes and their patterns This book represents a development of the author's previous book *Principles and Methods in Landscape Ecology* with greater emphasis on applications The first part is devoted to the fundamentals of landscape ecology critically revisited The second part focuses on landscape evaluation resilient properties fragility characteristics connectivity aspects and healthy conditions The last part concentrates on management approaches
