Artificial Intelligence, Humans and the Law Henrik Palmer Olsen, Jacob Livingston Slosser, Salome Addo Ravn, Johan Eddebo, Jonas Hultin Rosenberg, 2025-10-31 This book takes up the contentious issue of artificial intelligence AI and more specifically the evolving nature of AI mindedness as a legal entity in society With the increasing potential of AI suggested by the recent surge in creative and administrative tools and large language models there is a growing concern about the ethical and legal implications of incorporating AI into society As these systems become even more powerful and their ability to mimic human output grows the question of whether and how to attribute mental states to AI even in its most nascent form has

become a pressing concern. It is for example unclear what kind of mind AI might be capable of and therefore what the proper legal analogy might be for how we attribute reasoning capability, intent, responsibility, liability, agency and so on to it. This book contributes to this new and important area by bringing together front line research from diverse fields on the topic of understanding AI mindedness and how it and our relationship to it might be regulated. Through a collection of chapters written by experts from law, public administration, tort, psychoanalysis, philosophy, linguistics, computer science and political theory, this volume offers an insightful examination of current research, theoretical frameworks and practical applications that are shaping the AI human relationship. This book will be of considerable interest to scholars and researchers working in legal theory, socio legal studies, law and technology and science and technology studies.

The Oxford Handbook of the Sociology of Machine Learning Juan Pablo Pardo-Guerra, 2025-04. Machine learning, renowned for its ability to detect patterns in large datasets, has seen a significant increase in applications and complexity since the early 2000s. The Oxford Handbook of the Sociology of Machine Learning offers a state of the art and forward looking overview of the intersection between machine learning and sociology, exploring what sociology can gain from machine learning and how it can shed new light on the societal implications of this technology. Through its 39 chapters, an international group of sociologists address three key questions: First, what can sociologists yield from using machine learning as a methodological tool? This question is examined across various data types including text, images and sound, with insights into how machine learning and ethnography can be combined. Second, how is machine learning being used throughout society and what are its consequences? The Handbook explores this question by examining the assumptions and infrastructures behind machine learning applications, as well as the biases they might perpetuate. Themes include art, cities, expertise, financial markets, gender, race, intersectionality, law, enforcement, medicine and the environment, covering contexts across the Global South and Global North. Third, what does machine learning mean for sociological theory and theorizing? Chapters examine this question through discussions on agency, culture, human machine interaction, influence, meaning, power, dynamics, prediction and postcolonial perspectives. The Oxford Handbook of the Sociology of Machine Learning is an essential resource for academics and students interested in artificial intelligence, computational social science and the role and implications of machine learning in society.
