Doing Science The Reality Club :

Doing Science John Brockman, 1991 *Remaking Reality* Bruce Braun, Noel Castree, 2005-08-08 This book rejects apocalyptic pronouncements that the end of the millenium represents the end of nature as well Remaking Reality brings together contributors from across the human sciences who argue that a notion of social nature provides great hope for the future Applying a variety of theoretical approaches to social nature and engaging with debates in politics science technology and social movements surrounding race gender and class the contributors explore important and emerging sites where nature is now being remade with considerable social and ecological consequences The essays are organised around two themes capitalising and envisioning nature and actors networks and the politics of hybridity An afterword by Neil Smith reflects on the problems and possibilities of future names For critics and activists alike Remaking Reality provides essential theoretical and political tools to rethink environmentalism and progressive social natures for the twenty first century *Dazzle Gradually* Lynn Margulis, Dorion Sagan, 2007-08-15 At the crossroads of philosophy and science the sometimes dry topics of evolution and ecology come alive in this new collection of essays many never before anthologized Learn how technology may be a sort of second nature how the systemic human fungus *Candida albicans* can lead to cravings for carrot cake and beer how the presence of life may be why there s water on Earth and many other fascinating facts The essay Metametazoa presents perspectives on biology in a philosophical context demonstrating how the intellectual librarian pornographer and political agitator Georges Bataille was influenced by Russian mineralogist Vladimir Vernadsky and how this led to his notion of the absence of meaning in the face of the sun which later influenced Jacques Derrida thereby establishing a causal chain of influence from the hard sciences to topics as abstract as deconstruction and post modernism In Spirochetes Awake the bizarre connection between syphilis and genius in the life of Friedrich Nietzsche is traced The astonishing similarities of the Acquired Immune Deficiency Syndrome symptoms with those of chronic spirochete infection it is argued contrast sharply with the lack of evidence that HIV is the cause of AIDS Throughout these readings we are dazzled by the intimacy and necessity of relationships between us and our other planetmates In our ignorance as civilized people we dismiss disdain and deny our kinship with the only productive life forms that sustain this living planet **Slanted Truths** Lynn Margulis, Dorion Sagan, 2013-11-27 This enticing collection is as devoted to the profound power of figures of speech as any oration of old Hellas Metaphor reigns as we encounter the identification of our Earth as a Single integrative organism a tale told in image and passion The discoveries and conjectures upon which this grand view rest are here as well I have enjoyed these two dozen pieces hugely No family tree of animal life but must somewhere disclose a cousinly infolding We are compact of life past and the looped handing down is more complex than the Mendel Morgan dance of chromosomes and genes That dance is essential certainly but it is the vital editing of an epic and many rooted work a book more like the Bible than like one great artists Remembrance of Things Past We follow a few old shelves of bound DNA not just a single book Our major biochemical

package for oxidative metabolism was described in a small DNA manual somehow engulfed to become an organelle within a lucky ancient ancestral anaerobe and passed ever since via FOREWORD from mother to offspring outside of the chromosome shuffle. The sperm do carry half the compact genetic message of the human DNA but they are too small to transfer this equally essential symbiotic one that comes down from the mothers within roomy egg after roomy egg.

Gaian Systems Bruce Clarke, 2020-09-29 A groundbreaking look at Gaia theory's intersections with neocybernetic systems theory. Often seen as an outlier in science, Gaia has run a long and varied course since its formulation in the 1970s by atmospheric chemist James Lovelock and microbiologist Lynn Margulis. *Gaian Systems* is a pioneering exploration of the dynamic and complex evolution of Gaia's many variants with special attention to Margulis's foundational role in these developments. Bruce Clarke assesses the different dialects of systems theory brought to bear on Gaia discourse. Focusing in particular on Margulis's work including multiple pieces of her unpublished Gaia correspondence, he shows how her research and that of Lovelock was concurrent and conceptually parallel with the new discourse of self-referential systems that emerged within neocybernetic systems theory. The recent Gaia writings of Donna Haraway, Isabelle Stengers, and Bruno Latour contest its cybernetic status. Clarke engages Latour on the issue of Gaia's systems description and extends his own systems theoretical synthesis under what he terms metabiotic Gaia. This study illuminates current issues in neighboring theoretical conversations from biopolitics and the immunitary paradigm to NASA astrobiology and the Anthropocene. Along the way, he points to science fiction as a vehicle of Gaian thought. Delving into many issues not previously treated in accounts of Gaia, *Gaian Systems* describes the history of a theory that has the potential to help us survive an environmental crisis of our own making.

The Sacred Cosmos Terence L. Nichols, 2009-01-07 In this careful and closely argued book, Terence Nichols presents a vigorous challenge to naturalistic thinking. We are offered the persuasive vision of a world of many leveled richness whose Creator is continually active within its unfolding history. John Polkinghorne, University of Cambridge. This is a uniquely valuable work for our time. *The Sacred Cosmos* takes on the ambitious task of a synthesis of the contributions of contemporary science, basic Thomistic philosophy of being, and the human person, and basic themes of Christian theology on God, creation, and the relations between God and the world. The author, a theologian, brings to his task an amazing background and range of competence both in contemporary science and Christian theology. The most valuable part of the book is the author's powerful and cogent critique of the widely influential scientific naturalism of our day, which claims the only reliable way of knowing is that of modern science and all that exists can be explained by the evolving interaction of material elements, leaving no place for anything of the spiritual order, like the human soul, moral values, or God. W. Norris Clarke, S.J., Fordham University. In this sensible and solid reply to scientific atheism or naturalism, Nichols charts the way for a new harmony between science and spirituality. I recommend it to anyone interested in the interaction of religion and science. Alan Padgett, author of *Science and the Study of God: A Mutuality Model for Theology and Science*. *Mondo 2000* R. U.
