**Best Books for Children** John Thomas Gillespie, Corinne J. Naden, 1994      **The Natural Law of Cycles** James H. Bunn, 2017-07-28 The Natural Law of Cycles assembles scientific work from different disciplines to show how research on angular momentum and rotational symmetry can be used to develop a law of energy cycles as a local and global influence. Angular momentum regulates small scale rotational cycles such as the swimming of fish in water, the running of animals on land, and the flight of birds in air. Also, it regulates large scale rotation cycles such as global currents of wind and water. James H. Bunn introduces concepts of symmetry, balance, and angular momentum, showing how together they shape the mobile symmetries of animals. Chapter 1 studies the configurations of animals as they move in a head-first direction. Chapter 2 shows how sea animals follow currents and tides generated by the rotational cycles of the earth. In chapter 3, Bunn explores the biomechanical pace of walking as a partial cycle of rotating limbs. On a large scale, angular momentum governs balanced shifts in plate tectonics. Chapter 4 begins with an examination of rotational wind patterns in terms of the counterbalancing forces of angular momentum. The author shows how these winds augment the flights of birds during migrations. A final chapter centres on the conservation of energy as the most basic principle of science. Bunn argues that in the nineteenth century, the unity of nature was seen in the emergent concept of energy, not matter as the source of power, including the movements of animals and machines. In each chapter, Bunn features environmental writers who celebrate mobile symmetries. This book will interest students, naturalists, and advocates of the environmental movement.      *The World Book Encyclopedia: Research Guide - Index* World Book, Inc., 2007 An encyclopedia designed especially to meet the needs of elementary, junior high, and senior high school students.      **Films You Saw in School** Geoff Alexander, 2014-01-10 Millions of dollars in public funds were allocated to school districts in the post-Sputnik era for the purchase of educational films, resulting in thousands of 16mm films being made by exciting young filmmakers. This book discusses more than 1,000 such films, including many available to view today on the Internet. People ranging from adult film stars to noted physicists appeared in them; some notable directors made them; people died filming them; religious entities attempted to ban them; and even the companies that made them tried to censor them. Here, this remarkable body of work is classified into seven subject categories, within which some of the most effective and successful films are juxtaposed against those that were didactic and plodding treatments of similar thematic material. This book, which discusses specific academic classroom films and genres, is a companion volume to the author's *Academic Films for the Classroom: A History* (McFarland), which discusses the people and companies that made these films.      **Science Fiction Book Review Index, 1923-1973** Halbert W.
