*Domain Theory, Logic and Computation* Guo-Qiang Zhang, J. Lawson, Ying Ming Liu, M.K. Luo, 2013-06-29 Domains are mathematical structures for information and approximation they combine order theoretic logical and topological ideas and provide a natural framework for modelling and reasoning about computation The theory of domains has proved to be a useful tool for programming languages and other areas of computer science and for applications in mathematics Included in this proceedings volume are selected papers of original research presented at the 2nd International Symposium on Domain Theory in Chengdu China With authors from France Germany Great Britain Ireland Mexico and China the papers cover the latest research in these sub areas domains and computation topology and convergence domains lattices and continuity and representations of domains as event and logical structures Researchers and students in theoretical computer science should find this a valuable source of reference The survey papers at the beginning should be of particular interest to those who wish to gain an understanding of some general ideas and techniques in this area

**Logic and Computation** Lawrence C. Paulson, 1987 This book is concerned with techniques for formal theorem proving with particular reference to Cambridge LCF Logic for Computable Functions Cambridge LCF is a computer program for reasoning about computation It combines the methods of mathematical logic with domain theory the basis of the denotational approach to specifying the meaning of program statements Cambridge LCF is based on an earlier theorem proving system Edinburgh LCF which introduced a design that gives the user flexibility to use and extend the system A goal of this book is to explain the design which has been adopted in several other systems The book consists of two parts Part I outlines the mathematical preliminaries elementary logic and domain theory and explains them at an intuitive level giving reference to more advanced reading Part II provides sufficient detail to serve as a reference manual for Cambridge LCF It will also be a useful guide for implementors of other programs based on the LCF approach

*Foundations of Software Science and Computation Structures*, 2003 **Logic Colloquium 2000 (hardcover)** Rene Cori, 2005-04-25 This compilation of papers presented at the 2000 European Summer Meeting of the Association for Symbolic Logic marks the centennial anniversary of Hilbert's famous lecture Held in the same hall at La Sorbonne where Hilbert first presented his famous problems this meeting carries special significance to the Mathematics and Logic communities The presentations include tutorials and research articles from some of the world's preeminent logicians Three long articles are based on tutorials given at the meeting and present accessible expositions of developing research in three active areas of logic model theory computability and set theory The eleven subsequent articles cover separate research topics in all areas of mathematical logic including aspects in Computer Science Proof Theory Set Theory Model Theory Computability Theory and aspects of Philosophy

*Twenty Five Years of Constructive Type Theory* Giovanni Sambin, Jan M. Smith, 1998-10-15 Per Martin Lof's work on the development of constructive type theory has been of huge significance in the fields of logic and the foundations of mathematics It is also of broader philosophical significance and

has important applications in areas such as computing science and linguistics This volume draws together contributions from researchers whose work builds on the theory developed by Martin L f over the last twenty five years As well as celebrating the anniversary of the birth of the subject it covers many of the diverse fields which are now influenced by type theory It is an invaluable record of areas of current activity but also contains contributions from N G de Bruijn and William Tait both important figures in the early development of the subject Also published for the first time is one of Per Martin L f s earliest papers **Mathematical Reviews** ,2005 **Theorem Proving in Higher Order Logics** ,2004 **Logic of Domains** G.

Zhang,2012-12-06 This monograph studies the logical aspects of domains as used in de notational semantics of programming languages Frameworks of domain logics are introduced these serve as foundations for systematic derivations of proof systems from denotational semantics of programming languages Any proof system so derived is guaranteed to agree with denotational se mantics in the sense that the denotation of any program coincides with the set of assertions true of it The study focuses on two categories for dena tational semantics SFP domains and the less standard but important category of stable domains The intended readership of this monograph includes researchers and graduate students interested in the relation between semantics of program ming languages and formal means of reasoning about programs A basic knowledge of denotational semantics mathematical logic general topology and category theory is helpful for a full understanding of the material Part I SFP Domains Chapter 1 Introduction This chapter provides a brief exposition to domain theory denotational se mantics program logics and proof systems It discusses the importance of ideas and results on logic and topology to the understanding of the relation between denotational semantics and program logics It also describes the motivation for the work presented by this monograph and how that work fits into a more general program Finally it gives a short summary of the results of each chapter 1 1 Domain Theory Programming languages are languages with which to perform computa tion

*Mathematical Theory of Domains* V. Stoltenberg-Hansen,I. Lindström,E. R. Griffor,1994-09-22 Introductory textbook general reference in domain theory for professionals in computer science and logic Logic and Computer Science Piergiorgio Odifreddi,1990 The application of mathematical logic to computer science continues to be of major importance in the development of more advanced systems In this book a combination of survey chapters and applications work is presented particularly concentrating on lamda calculus typed functional programming and theorem provers **Proceedings of the 1992 ACM Conference on LISP and Functional Programming** Association for Computing Machinery,1992

**Proceedings of the ... International ACM SIGPLAN Conference on Principles and Practice of Declarative Programming** ,2009 Domain-theoretic Foundations of Functional Programming Thomas Streicher,2006 This textbook provides a basis for a PhD course on domain theoretic semantics of functional programming languages and their meta mathematical properties It introduces basic domain theory and the technique of logical relations as developed by Scott and Plotkin The solution of recursive domain equations is explained in detail A complete discussion of the famous full abstraction

problem for PCF a functional Kernel language due to Scott and Plotkin is given including a construction of the fully abstract Milner model using Kripke logical relations A final chapter introduces computability in Scott domains and shows that this model is fully abstract and universal for appropriate extensions of PCF by parallel language constructs
