Divergence and Convergence of Automobile Fuel Economy Regulations Masahiko Iguchi, 2015-04-08 This book reveals the mechanisms underlying the convergence of car fuel economy regulations in Europe, Japan and the US by drawing upon a constructivist theory of International Relations and law that focuses on business competition and environmental regulations. It offers new understanding of the topic of cars and an issue of climate change, discussing the emerging phenomenon of convergence of fuel economy regulations, addressing the role of business actors in pushing for climate change action, proposing the new model of agency with and beyond states and providing insightful case studies from Europe, Japan and the US. The opening chapter reviews the automobile industry and global climate change, providing a background for the discussion to follow. Chapter 2, Business Actors and Global Environmental Governance, grounds the discussion in the field of environmental governance. The third chapter is a case study examining the construction and timing of the European Union's climate policies for automobile CO₂ emissions, discussing the underlying factors and the actors influencing the policies. The following chapter argues that Japan adopted its stringent fuel economy regulations primarily because of industry competitiveness motivated by stringent environmental regulations in export markets and encouraged by a tradition of co-regulation and corporatism to enhance the regulations. Chapter 5 asks why the US, the first country to introduce fuel economy regulations, spent two decades in regulatory stagnation and discusses how recent US fuel economy regulations came to converge with Japanese and European standards. Chapter 6 compares, contrasts and analyzes fuel economy regulations among the three case studies and identifies policy implications for the future climate governance for 2015 and beyond. The final chapter explores applicability of the agency with and beyond the state model to other sectors and to climate governance as a whole.

Business Power and Conflict in International Environmental Politics Robert Falkner, 2008 Robert Falkner's excellent book addresses a vitally important topic on which the literature is relatively under developed. His approach is radically different and directly engages existing explanations of the role of business in global environmental politics. This will certainly mean its appearance on reading lists. John Vogler, Professor of International Relations, Keele University, UK. Falkner's contribution is to demonstrate how accounts of the considerable power and influence of business can remain strongly sensitive to the varied nature of business interests and the particularity of the political circumstances with which they are inevitably enmeshed.
