It provides interactive and multidisciplinary approaches that will help prepare present and future generations to face the technological and social challenges they will face. Rather than using a unidirectional didactic approach, the authors—scientists, philosophers, communication experts, science historians, and science education innovators—divide the book into two parts. The first part, *Communicating Contemporary Physics*, examines how new physics developments affect modern culture, while the second part, *Digital Challenges for Physics Learning*, covers physics education research using ICT plus the experiences of classroom teachers and a range of ideas and projects to innovate physics and STEM teaching.
