### **Regional Economic Outlook, Europe, October 2025**

International Monetary,2025-10-17 Europe has managed major shocks but growth is slowing export gains are reversing due to tariffs and bond markets reflect rising risks Interest rate cuts and increased fiscal spending including defense have not spurred private demand The productivity gap with the US remains wide and structural reforms are lagging National priorities and slow EU decision making hinder deeper integration of capital labor and product markets Without stronger growth and fiscal consolidation average European debt could reach 130 percent of GDP by 2040 requiring significant fiscal adjustment Near term policies should maintain price stability start fiscal consolidation and keep trade open Long term growth depends on urgent structural reforms Solutions lie firmly within Europe s grasp An intensive debate to dismantle market fragmentation simplify regulation and boost investment is underway Appropriate bundling sequencing and timing of reforms can garner broad support by spreading gains across society and nimbler decision making in the European Union would help move faster from recognition to forceful action

*Harnessing Artificial Intelligence (AI) to Combat Deforestation in U.S. Agriculture* Ruth Nyads, 2025-02-10 Scientific Study from the year 2024 in the subject Environmental Sciences Climate and environmental protection grade A language English abstract Agricultural conversion is a major reason for deforestation that affects the United States and is responsible for the loss of species soil depletion and global warming This work aims to analyze the use of AI for combating deforestation in the agricultural sector in the United States through improved surveillance risk assessments and policy modeling This proposed framework combines satellite imagery data agricultural records and selected socio economic factors and uses CNNs GBMs and ABMs to tackle deforestation systematically CNNs also showed an accuracy of 94% in the identification of the area of

deforestation while the GBMs showed an accuracy of 0.92 AUC ROC in identifying hotspot areas. Through ABMs that assumed policy changes such as reforestation incentives and fines for violators, the study showed that deforestation rates could be cut by up to 25%. Regression and correlation analyses and hypothesis testing proved significant predictors such as crop yield, rainfall variability, and the superiority of the models to conventional techniques. The outcomes reveal that AI can offer an effective solution to increase food production and maintain forests at the same time. This framework allows for the formulation of specific recommendations for policy initiatives because it incorporates empirical evidence. Further research should improve the modularity, the real-time monitoring system, and the access to the algorithm to further increase the impact of AI on sustainable land management and the chopping down of forests.

### **Reimagining Talent**

PV Ramana Murthy, 2025-11-16. The world over, boards, CEOs, CHROs, and top managements are united in their belief that managing talent is one of the most important aspects of running any business. And yet, there seems to be no clarity on what constitutes talent and how one should identify and nurture it. Traditional tools such as bell curves, nine-block grids, potential assessments, etc., often create more frustration than clarity among employees. At the same time, organizations struggle to identify the right talent and retain them in an environment marked by high volatility and low engagement. Reimagining Talent challenges and demystifies many of the long-held assumptions about talent in the corporate world. At the very heart of this book is a groundbreaking talent architecture arrived at through solid research and interviews with employees and senior leaders from corporates across diverse regions including India, the United States of America, Japan, the Middle East, Romania, the United Kingdom, and Germany. It introduces a practical road map, the Three Cs of Talent Enablers: Culture of Oneness, Competitive Adaptability, and Complexity, to help organizations move beyond outdated practices and embed genuine talent management into their core business strategy. Grounded in real-life examples and credible research, Reimagining Talent demonstrates how organizations and employees can unlock their full potential and help both individuals and businesses grow collectively.
