Decision Analysis with Supertree Peter McNamee, John Celona, 1991-01-01 **Decision Analysis for the Professional with Supertree** Peter McNamee, John Celona, 1987 **Text-Decision Analysis W /Supertree** McNamee, 1997-07 **Decision analysis for the professional with Supertree. Answers to problems and discussion notes** Peter MacNamee, John Celona, 1988 **Managerial Decision Analysis** Danny Samson, 1992-05-19 This text focuses on how decision analysis can be used to support the managerial decision process It supports professors and students in the classroom with extensive case studies and problem sets and with Arborist software and documentation **Decision Analysis Applied to Utility Fuel Planning and Management** B. E. Robinson, 1988 Decision analysis offers quantitative methods for dealing consistently logically and thoroughly with the uncertainties and complexities in today s utility fuel planning environment In this report the basic concepts and techniques of decision analysis are applied to several examples of decisions facing utility fuel planners coal mine development strategy contract mix decisions and fuel inventory policy Includes a tutorial in decision analysis sample applications and technical appendixes Building Economics: Theory and Practice Rosalie Ruegg, Harold Marshall, 2013-11-11 We no longer build buildings like we used to nor do we pay for them in the same way Buildings today are no longer only shelter but are also life support systems communication terminals data manufacturing centers and much more Buildings are incredibly expensive tools that must be constantly adjusted to function efficiently The economics of building has become as complex as its design When buildings were shelter they lasted longer than their builders The av erage gothic master mason lived 35 or 40 years Cathedrals took 3 or 4 hundred years to build Cost estimates were verified by great great grandchildren of the original designer Today creative economics has become as important as creative design and creative building The dient brings builder contractor architect and facilities manager to account in their life time The cost of building can therefore no longer be left to chance or act of god Solutions are no longer as ingeniously simple as those proposed by a Flor entine builder early in the 15th century He proposed to center the dome of S Maria del Fiore on a great mound of earth mixed with pennies When the job was done street urchins would carry away the dirt in their search for the pennies This was a serious suggestion offered by an early construction manager before Brunelleschi solved the problem more sensibly **Managerial Decisions Under Uncertainty** Bruce F. Baird, 1991-01-16 How to improve decision making skills in realistic situations and do it in a reasonably nonmathematical fashion Develops practical techniques for deciding upon the best strategies in a variety of situations Provides methods for reducing complex problems to easily drawn decision diagrams trees supported by real world examples Includes detailed cases that employ the methods described in the text Each chapter contains illustrative examples and exercises **Interfaces** ,2004 Seeks to improve communication between managers and professionals in OR MS **Sensitivity Analysis in Multi-objective Decision Making** David Rios Insua, 2013-06-29 The axiomatic foundations of the Bayesian approach to decision making

assume precision in the decision maker's judgements. In practice decision makers often provide only partial and/or doubtful information. We unify and expand results to deal with those cases introducing a general framework for sensitivity analysis in multi-objective decision making. We study first decision making problems under partial information. We provide axioms leading to modelling preferences by families of value functions in problems under certainty and modelling beliefs by families of probability distributions and preferences by families of utility functions in problems under uncertainty. Both problems are treated in parallel with the same parametric model. Alternatives are ordered in a Pareto sense, the solution of the problem being the set of non-dominated alternatives. Potentially optimal solutions also seem acceptable from an intuitive point of view and due to their relation with the non-dominated ones. Algorithms are provided to compute these solutions in general problems and in cases typical in practice: linear and bilinear problems. Other solution concepts are criticised on the grounds of being ad hoc. In summary we have a more robust theory of decision making based on a weaker set of axioms but embodying coherence since it essentially implies carrying out a family of coherent decision analyses.
