   The SAGE Handbook of Complexity and Management Peter Allen,Steve Maguire,Bill McKelvey,2011-03-18 The SAGE Handbook of Complexity and Management is the first substantive scholarly work to provide a map of the state of art research in the growing field emerging at the intersection of complexity science and management studies Edited and written by internationally respected scholars from management and related disciplines the Handbook will be the definitive reference source for understanding the implications of complexity science for management research and practice Part One Foundations introduces complexity science and its implications for the foundations of scientific knowledge including management knowledge Part Two Applications presents the numerous ways in which complexity science models and tools as well as complexity thinking are being applied to management and organizational phenomena and the insights gained as a result Part Three Interfaces highlights how complexity science is transforming various non management fields and in so doing creating exciting interfaces for bridging between management and related disciplines   *Emerging Syntheses In Science* David Pines,2018-03-05 Evolution of self replicating macromolecules through natural selection is a dynamically ordered process Two concepts are introduced to describe the physical regularity of macromolecular evolution sequence space and quasi species Natural selection means localization of a mutant distribution in sequence space This localized distribution called the quasi species is centered around a master sequence or a degenerate set that the biologist would call the wild type The self ordering of such a system is an essential consequence of its formation through self reproduction of its macromolecular consti tuents a process that in the dynamical equations expresses itself by positive diagonal coefficients called selective values The theory describes how population numbers of wild type and mutants are related to the distribution of selective values that is to say how value topography maps into population topography For selectively nearly neutral mutants appearing in the quasi species distribution population numbers are greatly enhanced as compared to those of disadvantageous mutants even more so in continuous domains of such selectively valuable mutants As a consequence mutants far distant from the wild type may occur because they are produced with the help of highly populated less distant precursors Since values are cohesively distributed like mountains on earth and since their positions are multiply connected in the high dimensional sequence space the overpopulation of nearly neural mutants provides guidance for the evolutionary process Localization in sequence space subject to a threshold in the fidelity of reproduction is steadily challenged until an optimal state is reached The model has been designed according to experimentally determined properties of self replicating molecules The conclusions reached from the theoretical models can be used to construct machines that provide optimal conditions for the evolution of functional macromolecules   *Cleansing the Cosmos* E. Janet Warren,2012-11-08 Understanding evil spiritual forces is essential for Christian theology yet discussion is almost always phrased in terms of spiritual warfare Warfare language is problematic being dualistic assigning a high degree of ontology to evil and poorly applicable to ministry This unique study proposes a

biblically based model as the first alternative to a spiritual warfare framework for dealing with the demonic thus providing insights for preaching counseling and missiology Warren develops this model using metaphor theory and examining four biblical themes Creation Cult Christ and Church Metaphors of cleansing ordering and boundary setting are developed in contrast to battle imagery and relevant theological issues are engaged Boyd s warfare imagery Barth s ideas of evil as nothingness and Eliade s notion of the sacred and the profane The role of the Holy Spirit is emphasized and the ontology of evil minimized This model incorporates concentric circles evil being considered peripheral to divine reality and provides a refreshing alternative to current spiritual warfare models **AI in Primary Care, An Issue of Primary Care: Clinics in Office Practice** Vincent Morelli,2025-10-28 In this issue of Primary Care Clinics in Office Practice guest editor Dr Vincent Morelli brings his considerable expertise to the topic of AI in Primary Care Top experts demystify artificial intelligence and introduce basic concepts of AI in primary care including how to understand AI outputs acknowledge limitations and reveal key AI technologies relevant to healthcare Additional articles discuss how AI can aid in patient diagnosis management and workflows Contains 13 relevant practice oriented topics including AI in risk assessment and prevention AI and social determinants of health AI in diagnosis and clinical decision making integrating AI solutions into administrative medicine and practice workflows ethical and legal considerations the future of AI in primary care and more Provides in depth clinical reviews on AI in primary care offering actionable insights for clinical practice Presents the latest information on this timely focused topic under the leadership of experienced editors in the field Authors synthesize and distill the latest research and practice guidelines to create clinically significant topic based reviews **Human-Computer Interaction – INTERACT 2025** Carmelo Ardito,Simone Diniz Junqueira Barbosa,Tayana Conte,André Freire,Isabela Gasparini,Philippe Palanque,Raquel Prates,2025-10-10 This four volume set LNCS 16108 16111 constitutes the proceedings of the 20th IFIP TC 13 International Conference on Human Computer Interaction INTERACT 2025 held in Belo Horizonte Brazil during September 8 12 2025 The 69 full papers 34 short papers and 79 papers of other types included in this book were carefully reviewed and selected from 330 submissions They were organized in topical sections as follows Part I Accessibility Adaptive and AI Powered Learning Systems Aesthetics in HCI Affective HCI and Emotion and Augmented Reality Part II Computer Supported Cooperative Work Context Dependent Systems Design and Evaluation in Smart and Ubiquitous Contexts Designing for Identity Safety and Cultural Values Emotionally Informed Design HCD for Mission Critical Systems HCI in Formal and Inclusive Learning Contexts HCI in Healthcare and Wellbeing and Human AI Interaction Part III Interaction with Small or Large Displays Learning Tools and Intelligent Tutoring Methodologies for HCI Multimodal Assistive Interfaces Usability Evaluation Methods Usable Privacy and Security Part IV Courses Industrial Experiences Interactive Demonstrations Panels Posters and Workshops **The Living Age** ,1914 **Tectonics of Strike-slip Restraining and Releasing Bends** W.
