Geometry V Robert Osserman, 2013-03-14 Few people outside of mathematics are aware of the varieties of mathematical experience the degree to which different mathematical subjects have different and distinctive flavors often attractive to some mathematicians and repellant to others The particular flavor of the subject of minimal surfaces seems to lie in a combination of the concreteness of the objects being studied their origin and relation to the physical world and the way they lie at the intersection of so many different parts of mathematics In the past fifteen years a new component has been added the availability of computer graphics to provide illustrations that are both mathematically instructive and esthetically pleasing During the course of the twentieth century two major thrusts have played a seminal role in the evolution of minimal surface theory The first is the work on the Plateau Problem whose initial phase culminated in the solution for which Jesse Douglas was awarded one of the first two Fields Medals in 1936 The other Fields Medal that year went to Lars V Ahlfors for his contributions to complex analysis including his important new insights in Nevanlinna Theory The second was the innovative approach to partial differential equations by Serge Bernstein which led to the celebrated Bernstein's Theorem stating that the only solution to the minimal surface equation over the whole plane is the trivial solution a linear function

Nevanlinna Theory And Its Relation To Diophantine Approximation (Second Edition) Min Ru, 2021-03-10 This book describes the theories and developments in Nevanlinna theory and Diophantine approximation Although these two subjects belong to the different areas one in complex analysis and one in number theory it has been discovered that a number of striking similarities exist between these two subjects A growing understanding of these connections has led to significant advances in both fields Outstanding conjectures from decades ago are being solved Over the past 20 years since the first edition appeared there have been many new and significant developments The new edition greatly expands the materials In addition three new chapters were added In particular the theory of algebraic curves as well as the algebraic hyperbolicity which provided the motivation for the Nevanlinna theory

Value Distribution Theory for Meromorphic Maps Wilhelm Stoll, 2013-06-29 Value distribution theory studies the behavior of meromorphic maps Let $f: M \rightarrow N$ be a meromorphic map between complex manifolds A target family $\{E_a\}_{a \in A}$ of analytic subsets E_a of N is given where A is a connected compact complex manifold The behavior of the inverse image family $\{f^{-1}(E_a)\}_{a \in A}$ is investigated A substantial theory has been created by many contributors Usually the targets E_a stay fixed However we can consider a finite set I of meromorphic maps $g: M \rightarrow A$ and study the incidence $f(z) \in E_g(z)$ for $z \in M$ and some $g \in I$ Here we investigate this situation M is a parabolic manifold of dimension m and $N = \mathbb{P}^n$ is the n dimensional projective space The family of hyperplanes in \mathbb{P}^n is the

target family parameterized by the dual projective space \mathbb{P}^1 . We obtain a Nevanlinna theory consisting of several First Main Theorems, Second Main Theorems and Defect Relations and extend recent work by B. Shiffman and by S. Mori. We use the Ahlfors-Weyl theory modified by the curvature method of Cowen and Griffiths. The Introduction consists of two parts. In Part A we sketch the theory for fixed targets to provide background for those who are familiar with complex analysis but are not acquainted with value distribution theory.

Complex Analysis Klas Diederich, 2013-04-17. This volume contains the Proceedings of the International Workshop Complex Analysis which was held from February 12-16, 1990 in Wuppertal, Germany in honour of H. Grauert, one of the most creative mathematicians in Complex Analysis of this century. In complete accordance with the width of the work of Grauert, the book contains research notes and longer articles of many important mathematicians from all areas of Complex Analysis. Altogether there are 49 articles in the volume. Some of the main subjects are Cauchy-Riemann Equations with estimates, q -convexity, CR structures, deformation theory, envelopes of holomorphy, function algebras, complex group actions, Hodge theory, instantons, Kähler geometry, Lefschetz theorems, holomorphic mappings, Nevanlinna theory, complex singularities, twistor theory, uniformization.

Contributions to Several Complex Variables Alan Howard, Pit-Mann Wong, 2013-06-29. In 1960 Wilhelm Stoll joined the University of Notre Dame faculty as Professor of Mathematics and in October 1984 the university acknowledged his many years of distinguished service by holding a conference in complex analysis in his honour. This volume is the proceedings of that conference. It was our privilege to serve along with Nancy K. Stanton as conference organizers. We are grateful to the College of Science of the University of Notre Dame and to the National Science Foundation for their support. In the course of a career that has included the publication of over sixty research articles and the supervision of eighteen doctoral students, Wilhelm Stoll has won the affection and respect of his colleagues for his diligence, integrity and humaneness. The influence of his ideas and insights and the subsequent investigations they have inspired is attested to by several of the articles in the volume. On behalf of the conference participants and contributors to this volume we wish Wilhelm Stoll many more years of happy and devoted service to mathematics.
