**Decision Technologies for Computational Finance** Apostolos-Paul N. Refenes, Andrew N. Burgess, John E. Moody, 2013-12-01 This volume contains selected papers that were presented at the International Conference COMPUTATIONAL FINANCE 1997 held at London Business School on December 15 17 1997 Formerly known as Neural Networks in the Capital Markets NNCM this series of meetings has emerged as a truly multi disciplinary international conference and provided an international focus for innovative research on the application of a multiplicity of advanced decision technologies to many areas of financial engineering It has drawn upon theoretical advances in financial economics and robust methodological developments in the statistical econometric and computer sciences To reflect its multi disciplinary nature the NNCM conference has adopted the new title COMPUTATIONAL FINANCE The papers in this volume are organised in six parts Market Dynamics and Risk Trading and Arbitrage strategies Volatility and Options Term Structure and Factor models Corporate Distress Models and Advances on Methodology This years acceptance rate 38% reflects both the increasing interest in the conference and the Programme Committee s efforts to improve the quality of the meeting year on year I would like to thank the members of the programme committee for their efforts in refereeing the papers I also would like to thank the members of the computational finance group at London Business School and particularly Neil Burgess Peter Bolland Yves Bentz and Nevil Towers for organising the meeting      Encyclopedia of Information Science and Technology Mehdi Khosrow-Pour, Mehdi Khosrowpour, 2009 This set of books represents a detailed compendium of authoritative research based entries that define the contemporary state of knowledge on technology Provided by publisher      *Handbook of Modeling High-Frequency Data in Finance* Frederi G. Viens, Maria Cristina Mariani, Ionut Florescu, 2011-12-20 CUTTING EDGE DEVELOPMENTS IN HIGH FREQUENCY FINANCIAL ECONOMETRICS In recent years the availability of high frequency data and advances in computing have allowed financial practitioners to design systems that can handle and analyze this information Handbook of Modeling High Frequency Data in Finance addresses the many theoretical and practical questions raised by the nature and intrinsic properties of this data A one stop compilation of empirical and analytical research this handbook explores data sampled with high frequency finance in financial engineering statistics and the modern financial business arena Every chapter uses real world examples to present new original and relevant topics that relate to newly evolving discoveries in high frequency finance such as Designing new methodology to discover elasticity and plasticity of price evolution Constructing microstructure simulation models Calculation of option prices in the presence of jumps and transaction costs Using boosting for financial analysis and trading The handbook motivates practitioners to apply high frequency finance to real world situations by including exclusive topics such as risk measurement and management UHF data microstructure dynamic multi period optimization mortgage data models hybrid Monte Carlo retirement trading

systems and forecasting pricing and boosting The diverse topics and viewpoints presented in each chapter ensure that readers are supplied with a wide treatment of practical methods Handbook of Modeling High Frequency Data in Finance is an essential reference for academics and practitioners in finance business and econometrics who work with high frequency data in their everyday work It also serves as a supplement for risk management and high frequency finance courses at the upper undergraduate and graduate levels

**Data Mining in Finance** Boris Kovalerchuk, Evgenii Vityaev, 2005-12-11 Data Mining in Finance presents a comprehensive overview of major algorithmic approaches to predictive data mining including statistical neural networks ruled based decision tree and fuzzy logic methods and then examines the suitability of these approaches to financial data mining The book focuses specifically on relational data mining RDM which is a learning method able to learn more expressive rules than other symbolic approaches RDM is thus better suited for financial mining because it is able to make greater use of underlying domain knowledge Relational data mining also has a better ability to explain the discovered rules an ability critical for avoiding spurious patterns which inevitably arise when the number of variables examined is very large The earlier algorithms for relational data mining also known as inductive logic programming ILP suffer from a relative computational inefficiency and have rather limited tools for processing numerical data Data Mining in Finance introduces a new approach combining relational data mining with the analysis of statistical significance of discovered rules This reduces the search space and speeds up the algorithms The book also presents interactive and fuzzy logic tools for mining the knowledge from the experts further reducing the search space Data Mining in Finance contains a number of practical examples of forecasting S P 500 exchange rates stock directions and rating stocks for portfolio allowing interested readers to start building their own models This book is an excellent reference for researchers and professionals in the fields of artificial intelligence machine learning data mining knowledge discovery and applied mathematics
