Michael Miller, Vlad P. Shmerko, Radomir S. Stankovic, 2005-12-22 Decision diagram DD techniques are very popular in the electronic design automation EDA of integrated circuits and for good reason They can accurately simulate logic design can show where to make reductions in complexity and can be easily modified to model different scenarios Presenting DD techniques from an applied perspective Decision Diagram Techniques for Micro and Nanoelectronic Design Handbook provides a comprehensive up to date collection of DD techniques Experts with more than forty years of combined experience in both industrial and academic settings demonstrate how to apply the techniques to full advantage with more than 400 examples and illustrations Beginning with the fundamental theory data structures and logic underlying DD techniques they explore a breadth of topics from arithmetic and word level representations to spectral techniques and event driven analysis The book also includes abundant references to more detailed information and additional applications Decision Diagram Techniques for Micro and Nanoelectronic Design Handbook collects the theory methods and practical knowledge necessary to design more advanced circuits and places it at your fingertips in a single concise reference Nanophotonic Information Physics Makoto Naruse, 2013-12-12 This book provides a new direction in the field of nano optics and nanophotonics from information and computing related sciences and technology Entitled by Information Physics and Computing in Nanoscale Photonics and Materials IPCN in short the book aims to bring together recent progresses in the intersection of nano scale photonics information and enabling technologies The topic will include 1 an overview of information physics in nanophotonics 2 DNA self assembled nanophotonic systems 3 Functional molecular sensing 4 Smart fold computing an architecture for nanophotonics 5 semiconductor nanowire and its photonic applications 6 single photoelectron manipulation in imaging sensors 6 hierarchical nanophotonic systems 8 photonic neuromorphic computing and 9 SAT solver and decision making based on nanophotonics **New Advances in Dependability of Networks and Systems** Wojciech Zamojski, Jacek Mazurkiewicz, Jarosław Sugier, Tomasz Walkowiak, Janusz Kacprzyk, 2022-05-26 The book consists of papers on selected topics of dependability analysis in computer systems and networks which were discussed during the 17th DepCoS RELCOMEX conference held in Wrocław Poland from June 27th to July 1st 2022 Their collection will be an interesting source material for scientists researchers practitioners and students who are dealing with design analysis and engineering of computer systems and networks and must ensure their dependable operation Being probably the most complex technical systems ever engineered by man and also the most dynamically evolving ones organization of contemporary computer systems and networks cannot be interpreted only as a structure built on the base of unreliable technical resources Their evaluation must take into account a unique blend of interacting people networks together with mobile properties cloud organization Internet

Introduction to Noise-Resilient Computing Svetlana N. Yanushkevich,Seiya Kasai,Golam Tangim,A.H. Tran,2022-06-01 Noise abatement is the key problem of small scaled circuit design New computational paradigms are needed as these circuits shrink they become very vulnerable to noise and soft errors In this lecture we present a probabilistic computation framework for improving the resiliency of logic gates and circuits under random conditions induced by voltage or current fluctuation Among many probabilistic techniques for modeling such devices only a few models satisfy the requirements of efficient hardware implementation specifically Boltzman machines and Markov Random Field MRF models These models have similar built in noise immunity characteristics based on feedback mechanisms In probabilistic models the values 0 and 1 of logic functions are replaced by degrees of beliefs that these values occur An appropriate metric for degree of belief is probability We discuss various approaches for noise resilient logic gate design and propose a novel design taxonomy based on implementation of the MRF model by a new type of binary decision diagram BDD called a cyclic BDD In this approach logic gates and circuits are designed using 2 to 1 bi directional switches Such circuits are often modeled using Shannon expansions with the corresponding graph based implementation BDDs Simulation experiments are reported to show the noise immunity of the proposed structures Audiences who may benefit from this lecture include graduate students taking classes on advanced computing device design and academic and industrial researchers
