Decision-making in Water Resource Allocation Carl Brown, Joseph G. Monks, James R. Park, 1973      Decision-making in Water Resource Allocation [by] Carl Brown, Joseph G. Monks [and] James R. Park Carl Brown, 1973      The Evolution of Water Resource Planning and Decision Making Clifford S. Russell, Duane D. Baumann, 2009 This broad review of the development of US water resource policy analysis and practice offers perspectives from several disciplines law economics engineering ecology and political science While the historical context provided goes back to the early 19th century the book concentrates on the past 60 years and features a discussion of the difficulty that has generally been encountered in bringing the disciplines of economics and ecology into collaboration in the water resource context The book explores the evolution of water related analytical capabilities and institutions and provides illustrations from case studies concluding with recommendations for research institutional change and action Though designed to be a background textbook for interdisciplinary graduate seminars in water resources planning and management it is accessible to interested lay readers and those who have policymaking or implementation responsibility but lack a technical background The book will appeal to students and faculty in water policy economics and engineering and in interdisciplinary programs organized around water resource problems and questions Policy makers and general readers will also appreciate this non technical introduction

Decision Making in Water Resources Policy and Management Barry Hart, Jane Doolan, 2017-05-19 Decision Making in Water Resource Policy and Management An Australian Perspective presents the latest information in developing new decision making processes Topics covered include key aspects of water resources planning recent water resource policy changes in irrigation urban and environmental considerations the evolution of a water market a number of case studies that provide real examples of improved decision making transfer of the Australian experience overseas and challenges for the future Many countries are experiencing major water scarcity problems which will likely intensify with the continued impacts of climate change In response to this challenge there is increased worldwide focus on the development of more sustainable and integrated water resource policies The Australian experience over the past three decades has led to major improvements in the decision making processes in water resources policy and management particularly in response to drought and climate change providing a great model on which other nations can use and adapt This information is essential to early to mid career practitioners engaged in policy planning and operational roles in all fields of water resource policy and management and catchment management Summarizes key results from three decades of changes in Australian water resource policy Illustrates how Australian knowledge is being used in other countries and how this might be expanded Provides international practitioners with real examples of where and how the Australian knowledge is assisting in other situations      **Risk-based Decision Making in Water Resources** Yacov Y. Haiman, Eugene Z. Stakhiv, 1990 Proceedings of the Fourth Engineering Conference held in Santa Barbara California October 15 20 1989 This collection contains 20 papers that address the

application of risk analysis to a wealth of water resources problems Current risk assessment issues confronting water resources planners are evaluated along with areas of uncertainty Requirements and procedures currently promoted by engineers in federal and state water resources agencies are identified Decision analysis methods and or models that can explicitly incorporate risk preferences are reviewed In addition various risk methodologies are discussed as they apply to dam safety flood control environmental impacts and other social economic and technological aspects of water resources planning and management

**Water Resources and Decision-Making Systems** Cecilia Tortajada, Kevin Parris, 2016-03-23 Water data and information are essential to support efforts to understand manage allocate utilize and protect water resources The linkages between Water Information Systems and needs of decision makers are complex but can be encapsulated in a Driving Force Policy Needs Monitoring Data Management Reporting framework The rapid development in water policy reforms in many sectors and growing emphasis on demand side policy solutions to water resources management has created an information imbalance This imbalance can be characterised in terms of an inverted pyramid with implementation of many water policy initiatives supported by little data and information especially related to economic and financial elements to help guide decision makers toward more effective and efficient water resources management strategies Additionally as stress and demands on water systems increase and water becomes a more valued resource this tends to increase the value of water information both for water providers and users Nevertheless many countries are reporting that the capacity to collect water information is being undermined by a lack of resources while expertise to collect analyse and interpret water data for decision makers is being lost Finally the impact of climate change on hydrological regimes represents a key potential stress on water systems This issue could be the catalyst for adapting policies to provide more efficient and effective use and management of water resources and advance institutional and governance reforms in the water sector This book is based on a special issue of the International Journal of Water Resources Development

Simonovic, 2020-12-23 During the past five decades we have witnessed a tremendous evolution in water resource system management Three characteristics of this

evolution are of particular note First the application of the systems approach to complex water management problems has been established as one of the most important advances in the field of water resource management Second the past five decades have brought a remarkable transformation of attitude in the water resource management community towards environmental concerns and action to address these concerns Third applying the principles of sustainability to water resource decision making requires major changes in the objectives on which decisions are based and an understanding of the complicated inter relationships between existing ecological economic and social factors The Special Issue includes 15 contributions that offer insights into contemporary problems approaches and issues related to the management of complex water resources systems It will be presumptuous to say that these 15 contributions characterize the success or failure of the systems approach to support water resources decision making However these contributions offer interesting lessons from current experiences and highlight possible future work
