Deductive Program Design Manfred Broy, 1996-06-18 Advanced research on the description of distributed systems and on design calculi for software and hardware is presented in this volume Distinguished researchers give an overview of the latest state of the art

Logic Programming I. Balbin, K. Lecot, 2012-12-06 Logic Programming was effectively defined as a discipline in the early seventies It is only during the early to mid eighties that books conferences and journals devoted entirely to Logic Programming began to appear Consequently much of the work done during this first crucial decade in Marseilles Edinburgh London Budapest and Stockholm to name a few is often overlooked or difficult to trace There are now two main regular conferences on Logic Programming and at least five journals The Journal of Logic Programming New Generation Computing Automated Reasoning The Journal of Symbolic Computation and Future Generation Computer Systems Logic Programming however has its roots in Automated Theorem Proving and via the expanding area of expert systems strongly influences researchers in such varied fields as Civil Engineering Chemistry Law etc Consequently many papers related to Logic Programming appear in a wide variety of journals and proceedings of conferences in other disciplines This is particularly true of Computer Science where a revolution is taking place in hardware design programming languages and more recently databases One cannot overestimate the importance of such a bibliography

The Use of Formal Specification of Software H.K. Berg, W.K. Giloi, 2012-12-06 The notion that program design is an engineering task alleviating the software crisis has been with us for about a decade With the recognized advantages of obeying to certain software design disciplines we are approaching the era of enforced system development standards which will ensure that end products will meet rigorous design requirements On the one hand advances in system architecture further the application of system development standards to software and firmware design and production On the other hand the growth in complexity of future system architectures in particular distributed systems with their special problems of cooperation and parallelism necessitate the use of rigorous specification and design techniques In addition to hampering the design process the lack of engineering techniques hinders research In many cases trial designs that are presented in abstract and informal terms do not force the designer to face the full problem spectrum and therefore may not sufficiently provide insight into the design process To prepare for the forthcoming discipline and to provide a snapshot view of recent advances in software and firmware engineering we organized in June of 1979 a seminar entitled The Use of Formal Specification of Software and Firmware The seminar took place at the Heinrich Hertz Institute Berlin and attracted over 60 participants most of them from the industry

Readings in Artificial Intelligence and Software Engineering Charles Rich, Richard C. Waters, 2014-06-28 *Readings in Artificial Intelligence and Software Engineering* covers the main techniques and application of artificial intelligence and software engineering The ultimate goal of artificial intelligence applied to software engineering is automatic programming Automatic programming would allow a user to simply say what is wanted and have a program produced completely automatically This

book is organized into 11 parts encompassing 34 chapters that specifically tackle the topics of deductive synthesis program transformations program verification and programming tutors The opening parts provide an introduction to the key ideas to the deductive approach namely the correspondence between theorems and specifications and between constructive proofs and programs These parts also describes automatic theorem provers whose development has be designed for the programming domain The subsequent parts present generalized program transformation systems the problems involved in using natural language input the features of very high level languages and the advantages of the programming by example system Other parts explore the intelligent assistant approach and the significance and relation of programming knowledge in other programming system The concluding parts focus on the features of the domain knowledge system and the artificial intelligence programming Software engineers and designers and computer programmers as well as researchers in the field of artificial intelligence will find this book invaluable
